CHRIST (DEEMED TO BE UNIVERSITY), BANGALORE KENGERI CAMPUS

MAGNOVITE

I G N I T E W H A T ' S N E X T

MAGNOVITE is the annual flagship fest of CHRIST (Deemed to be University), Kengeri Campus, a dynamic fusion of creativity, innovation, and collaboration that unites students from diverse disciplines. Returning with its 15th edition, Magnovite 2026 is all set to redefine the campus experience with its unmatched vibrancy and spirit.

Hosted by Kengeri Campus, CHRIST (Deemed to be University), this year's fest promises to be an electrifying techno-cultural extravaganza, where innovation meets imagination and every corner of the campus comes alive. With a thrilling mix of Management, Architecture, Psychology, Technical, and Cultural events, Magnovite 2026 offers an avenue for every student to engage, explore, and excel.

Expect adrenaline-pumping competitions, a buzzing carnival zone, and unforgettable cultural evenings that will light up the Kengeri skies. With extraordinary performances, hefty cash prizes, and the largest crowd yet, Magnovite 2026 ensures that no one leaves without a spark of inspiration and a story worth remembering.

GENERAL RULES AND REGULATIONS

- Magnovite will be conducted at CHRIST (Deemed to be University), Kengeri Campus on September 15th & 16th, 2026.
- The fest is open to Undergraduate & Postgraduate students of all disciplines.
- Multiple teams from the same university are allowed to participate in the fest.
- The fest is a national inter-collegiate competition.
- All participants are required to carry their respective College ID cards and Valid ID Proof.
- Online registrations in accordance can be done via the registration link provided in the e-mail or at magnovite.christuniversity.in.
- The individual registration fees are mentioned for each event in the brochure.
- Registration fees must only be paid through the South Indian Bank Portal link available on the registration form.
- Please take a screenshot of the payment and upload it to the registration form.
- The registration fee will not be refunded once the payment is made.
- Participants have to report to the assigned venue at least 30 minutes prior to the start of the event.

DEPARTMENT BASED EVENTS

COMPUTER SCIENCE AND ENGINEERING

Name of the Event	Number of Participants (Team size)	Registration Fee	Date	Team/solo event
Cipher Quest	2-4 Members	₹400 per team	Sept 15	Team
StrikeX	1 Member	₹200 per person	Sept 16	Solo
Sustain X	2-4 Members	₹400 per team	Sept 16	Team
Prompt Arcade	2-4 Members	₹400 per team	Sept 15	Team

AI AND DATA SCIENCE ENGINEERING

Name of the Event	Number of Participants (Team size)	Registration Fee	Date	Team/Solo Event
TRACE	3-4 Members	₹400 per team	Sept 15	Team

COMPUTER SCIENCE AND ENGINEERING

CIPHER QUEST

A three-round cryptography challenge where participants program their way through Caesar, Vigenère, and Affine ciphers.

DESCRIPTION

Cipher Quest is a cryptography-based programming challenge that takes participants through three progressive rounds involving classical cipher techniques. Participants will be required to apply their programming and problem-solving skills to solve cipher-based challenges and uncover information that leads them through the quest. The event will involve the Caesar Cipher, Vigenère Cipher, and Affine Cipher, with participants expected to understand and implement these techniques during the competition. Each round introduces a new challenge that tests their ability to analyse cipher patterns, develop appropriate programs, and arrive at the correct solution. The event combines cryptography, programming, logical reasoning, and problem-solving in an engaging, progressive challenge designed to test both technical knowledge and the ability to adapt to different cipher techniques.

EVENT STRUCTURE

ROUND 1 – CAESAR CIPHER:

Participants will receive a cipher-based challenge involving the Caesar Cipher and must develop a program to solve it. Successful completion of the challenge will provide the information required to proceed to the next round.

ROUND 2 – VIGENÈRE CIPHER:

Participants will receive a Vigenère Cipher challenge along with the necessary information to solve it. They must develop a program to decrypt the given message and successfully complete the challenge to proceed further.

ROUND 3 – AFFINE CIPHER:

Participants will face a final Affine Cipher challenge requiring them to develop and implement a suitable program to solve the given task. Successful completion of the challenge will reveal the final outcome of the quest.

The first team to successfully complete all three rounds will be declared the winner.

COMPUTER SCIENCE AND ENGINEERING

RULES AND REGULATIONS

- Each team must consist of 2–4 members.
- Participants must complete the rounds in the given sequence.
- Teams must write their own programs for encryption and decryption during the event.
- The required cipher and relevant information will be provided at the beginning of each round.
- Teams may use publicly available resources and documentation for reference.
- Copying another team's code or solutions is strictly prohibited.
- Teams must submit their decoded/encrypted outputs within the specified time limit.
- Any form of unauthorized collaboration, plagiarism, or unfair assistance will result in disqualification.
- Participants must not interfere with or attempt to access another team's files, systems, or work.
- The organizers may provide hints or clarifications at their discretion.
- The judges' decision will be final and binding.
- The organizers reserve the right to modify the rules, challenges, or schedule if necessary.
- The use of AI tools is not encouraged, as the event is intended to test participants' own programming, logical reasoning, and problem-solving skills.

POC DETAILS

COMPUTER SCIENCE AND ENGINEERING

STRIKE X

A competitive eFootball™ Mobile tournament where players battle through knockout rounds to become the ultimate champion.

DESCRIPTION

StrikeX is a competitive eFootball™ Mobile (PES Mobile) tournament where participants compete in one-on-one football matches. The tournament will test players' football gaming skills, tactical decision-making, precision, strategy, and adaptability through a structured knockout format. Participants will progress through successive rounds, with the best players advancing towards the Grand Final. The event aims to provide an engaging and competitive platform for students to showcase their skills while promoting sportsmanship, healthy competition, and strategic gameplay. It offers football and gaming enthusiasts an opportunity to compete against one another and experience the excitement of an organized digital football tournament.

EVENT STRUCTURE

The tournament will be conducted through a structured competitive format for each selected game.

STAGE 1 – QUALIFIERS:

All registered participants will compete in one-on-one matches, with winners advancing to the next round.

STAGE 2 – KNOCKOUTS:

Qualified participants will compete in successive knockout matches, with winners progressing towards the finals.

STAGE 3 – GRAND FINALS:

The final two participants will compete in the Grand Final, with the winner crowned the StrikeX Champion.

COMPUTER SCIENCE AND ENGINEERING

RULES AND REGULATIONS

- Each participant must register before the specified registration deadline.
- Each match will be played using the official eFootball™ Mobile (formerly PES Mobile) version specified by the organizers.
- Participants must use their registered gaming accounts throughout the tournament.
- All matches must be played using the settings and match format specified by the organizers.
- Any form of cheating, hacking, exploiting glitches, or use of unauthorized software is strictly prohibited.
- Participants must report to the designated gaming area before their scheduled match time.
- Late arrival or failure to appear for a scheduled match may result in forfeiture or disqualification.
- Participants must maintain proper sportsmanship and respectful conduct throughout the tournament.
- Participants must not interfere with another participant's device, account, match, or network.
- Any technical issues must be immediately reported to the organizers.
- Game-specific tie-breaker rules will be applied wherever required.
- The organizers' and referees' decisions will be final and binding.
- The organizers reserve the right to modify the schedule, rules, or match format if necessary.

COMPUTER SCIENCE AND ENGINEERING

SUSTAIN X

A rapid innovation challenge where teams build and pitch technology-based solutions to real-world problems aligned with the Sustainable Development Goals.

DESCRIPTION

SUSTAIN-X is a technology-driven innovation competition that challenges participants to develop practical solutions to real-world problems aligned with the United Nations Sustainable Development Goals (SDGs). Teams will randomly select an SDG and receive a specific problem statement related to it, which they must address using technology of their choice. Participants will design and develop a functional prototype within the allotted time, encouraging them to apply creativity, technical knowledge, and innovative thinking to sustainability challenges. In the second round, teams will pitch and demonstrate their solutions before a panel of judges, explaining the problem, technology used, feasibility, and potential impact. SUSTAIN-X provides participants with an opportunity to explore how technology can be used to create meaningful social and environmental change while developing their problem-solving, prototyping, and communication skills.

EVENT STRUCTURE

ROUND 1 – BUILD:

Teams will randomly select an SDG and receive a specific problem statement related to it. They will then design and develop a functional technological prototype using technologies of their choice within the allotted time.

ROUND 2 – PITCH & DEMO:

Teams will present and demonstrate their prototype before the judges, explaining the problem, proposed solution, technology used, feasibility, and potential impact of their project.

The team demonstrating the most innovative, feasible, and impactful technological solution will be declared the winner.

COMPUTER SCIENCE AND ENGINEERING

RULES AND REGULATIONS

- Each team must consist of 2–4 members.
- Teams must randomly select one SDG and work only on the assigned problem statement.
- The solution must be technology-based and developed during the event.
- Teams may use AI tools, online resources, and development platforms during the event.
- The prototype must be functional or demonstrable during the final pitch.
- Teams must submit their prototype within the specified time limit.
- Projects must be original, and plagiarism or copying another team's work is strictly prohibited.
- Teams must clearly state the technology and resources used in their solution.
- Teams must adhere to the specified pitch and demonstration time limit.
- Any form of unauthorized collaboration or unfair assistance will result in disqualification.
- The judges' decision will be final and binding.
- The organizers reserve the right to modify the rules or schedule if necessary.

COMPUTER SCIENCE AND ENGINEERING

PROMPT ARCADE

An AI-powered game development challenge where participants create a game and its website using prompt engineering and AI-assisted coding.

DESCRIPTION

Prompt-Arcade is an AI-powered game development and web design competition that challenges participants to transform creative ideas into a playable game and a complete game website using AI-assisted coding and prompt engineering. Participants will use AI tools to generate, refine, and customize their ideas while solving development challenges and bringing their creative vision to life. The event combines creativity, technology, gaming, and web development, giving participants an opportunity to explore practical applications of AI in the development process. Along with creating a functional game, participants will also develop a dedicated website to present their creation as a complete digital product. The event encourages experimentation, problem-solving, adaptability, and creative use of AI while providing an engaging and hands-on experience for participants.

EVENT STRUCTURE

STAGE 1 – AI GAME DEVELOPMENT:

Participants will begin by receiving a game development challenge along with a randomly assigned theme such as Retro, Horror, Sci-Fi, or Arcade, which they must incorporate into their game, which will determine the creative direction of their game. Using AI-assisted coding and prompt engineering, teams will develop a functional and playable game while refining their ideas, debugging their code, and incorporating their assigned theme. During the stage, participants will also be given an additional challenge that tests their ability to adapt and modify their game within a limited time.

STAGE 2 – WEBSITE DEVELOPMENT:

Teams will transform their completed game into a fully designed game website using AI-assisted development. The website should present the game as a complete digital product and may include game information, instructions, visuals, and a playable version of the game.

COMPUTER SCIENCE AND ENGINEERING

RULES AND REGULATIONS

- Each team must consist of 2–4 members.
- All teams will receive the same base game challenge.
- The game theme will be assigned through a random draw and must be incorporated into the game.
- Participants may use AI-assisted coding and development tools throughout the event.
- The game must be functional and playable at the end of Stage 1.
- The surprise modification must be completed within the allotted 15-minute time limit.
- Teams must create a website for their game during Stage 2.
- The final game and website must be submitted before the specified deadline.
- Participants may use publicly available resources, but copying another team's work is prohibited.
- Teams must be able to demonstrate their use of AI tools if requested by the judges.
- Plagiarism, unauthorized collaboration, or interference with other teams will result in disqualification.
- Any attempt to tamper with or disrupt another team's work is strictly prohibited.
- The judges' decision will be final and binding.
- The organizers reserve the right to modify the rules or schedule if necessary.

POC DETAILS

Student POC: Joshua Thomas (9880310075)

Student POC: Anna Theresa (8867084473)

Faculty POC: Dr. Sherin Paul (9385446508)

REGISTRATION FEE : 400 INR PER TEAM

TEAM SIZE: 2–4

AI AND DATA SCIENCE ENGINEERING

TRACE

Dig Through Digital Evidence, Trace Every Technical Indicator, Connect the Attack Chain, and Reveal What Really Happened.

DESCRIPTION

TRACE (Track → Retrieve → Analyze → Correlate → Examine) challenges you to answer one question: Can you uncover a cyber incident from the digital traces it leaves behind? Built around the tagline "Every Move Leaves a Trace," TRACE places participants in the role of cyber investigators, turning raw technical data into an evidence-backed story.

Teams investigate three independent cybersecurity cases using system logs, packet captures, file hashes, metadata and network records. With forensic and analysis tools at their disposal, participants extract indicators, identify anomalies, connect evidence and reconstruct how each incident unfolded. Teams can choose to investigate one, two or all three cases, creating their own strategy.

TRACE offers a hands-on introduction to digital forensics, network analysis, log analysis and incident reconstruction while testing technical reasoning, problem-solving and evidence correlation. The challenge is to move beyond simply finding information - to prove what happened, how it happened and why the evidence supports it.

EVENT STRUCTURE

TRACE is conducted as a three-case cyber investigation challenge in which teams analyse raw technical artifacts, extract relevant indicators using appropriate tools (Participants may use tools such as Wireshark, CyberChef, VS Code/Notepad++, Excel/Google Sheets, and PowerShell for analysing and extracting information from the provided technical artifacts) and correlate their findings to reconstruct fictional cybersecurity incidents. The three cases are released progressively at one-hour intervals, while teams may choose to investigate one, two, or all three cases. After the investigation period, teams prepare a Technical Incident Report and participate in a technical walkthrough and Q&A with the judges.

AI AND DATA SCIENCE ENGINEERING

RULES AND REGULATIONS

- The event is open to students from technical backgrounds.
- Each team must consist of 3–4 participants.
- Participants must carry a laptop with a charger for technical analysis and investigation.
- TRACE consists of three independent cybersecurity investigation cases. Case 1, Case 2 and Case 3 will be released at 11:00 AM, 12:00 PM and 2:00 PM, respectively.
- Each case will contain a brief, technical objective and a package of raw technical artifacts such as logs, packet captures, metadata, hashes, network records or other relevant files.
- Participants may use tools such as Wireshark, CyberChef, VS Code/Notepad++, Excel/Google Sheets, and PowerShell for analysing and extracting information from the provided technical artifacts. Teams are not restricted to these tools alone.
- The investigation phase will conclude at 3:00 PM. No further active investigation will be permitted after this time.
- Teams may prepare and update their Technical Incident Report throughout the investigation.
- Each team must use their own laptop/device for the investigation.
- The organisers will specify before the event whether internet access is permitted and which online resources may be accessed.
- AI tools can be used but finally the scoring comes down to how well you are able to present your findings during the technical walkthrough.
- External resources such as online databases, documentation, search engines or reference material may be used only where explicitly permitted.
- Teams must not obtain, share or use case-specific solutions or materials from sources outside the event.
- Participants must maintain professional and respectful behaviour throughout the event.
- Teams must follow all instructions given by the organisers, volunteers and event coordinators.
- Participants must not disturb other teams during the investigation or final evaluation.
- Participants must comply with the venue's rules regarding equipment, seating, internet access and general conduct.

AI AND DATA SCIENCE ENGINEERING

- Any disruptive, abusive or inappropriate behaviour may result in removal from the event.
- Plagiarism, impersonation, unauthorized access to another team's device or files, and any other form of cheating may result in immediate disqualification.
- Participants are responsible for ensuring that their laptops, chargers and required software are functioning before the investigation begins.
- In the event of a device failure, teams must immediately inform the organisers additional time or alternative arrangement will be provided solely at the organisers' discretion.
- Temporary network or internet failures will not automatically result in an extension of the investigation period.
- If a technical issue originates from the organisers' systems or provided materials and materially affects the investigation, the organisers may provide an appropriate remedy or time adjustment.
- The organisers reserve the right to modify, pause or temporarily suspend the event in case of technical, operational or unforeseen circumstances.
- Any decision regarding technical disruptions, extensions or operational adjustments will be made by the event organisers.
- Judges have the authority to ask teams to justify their methodology, tools, extracted indicators and conclusions.
- In case of a tie, the team with the higher score in Correlation of Findings & Reconstruction of the Incident Flow will rank higher.
- If the tie persists, the team with the higher score in Reasoning Behind the Findings will rank higher.
- Any dispute regarding judging, interpretation of evidence or application of the rules must be raised with the organisers during the event.
- The decision of the judging panel and event organisers shall be final and binding.

AI AND DATA SCIENCE ENGINEERING

PIXEL WHISPER

A team-based AI challenge where participants study a complex target image, recreate it through a communication-free generation relay, and compete to achieve the highest visual similarity to the original.

DESCRIPTION

Pixel Whisper is a creative, team-based AI image recreation challenge in which participants compete to reproduce a bizarre and visually complex target image using an organizer-provided image-generation platform. The event combines observation, memory, creativity, and teamwork in a structured relay format that prevents direct collaboration during the generation process.

At the beginning of each match, both competing teams are shown the same target image and are given a short discussion period to analyze its composition, objects, colours, and unusual visual details. Once the relay begins, team members take turns generating their interpretations without communicating with one another. Each participant may either refine the previous image or create a completely new interpretation before passing only the final generated image to the next teammate.

The event is designed to test visual observation, strategic thinking, adaptability, time management, and creative interpretation under communication constraints. It provides an engaging and entertaining competitive experience while encouraging participants to think critically about visual details and collaborative decision-making in an AI-assisted creative environment.

EVENT STRUCTURE

The event follows a knockout-based relay format conducted between two teams at a time. Each match consists of a target observation phase, a silent AI image-generation relay, and a final judging phase in which the generated outputs are compared with the original target image. Selected knockout matches may also include optional bonus rounds that provide strategic advantages for the upcoming relay round.

AI AND DATA SCIENCE ENGINEERING

RULES AND REGULATIONS

- The event is open to all students.
- Each team must consist of exactly 3 members.
- No substitutions are allowed after the event begins unless approved by the organizers under exceptional circumstances.
- All registered members must be present at the venue before their scheduled match.
- Failure to report on time may result in forfeiture.
- Two teams compete against each other in each match.
- Both teams receive the same target image.
- The event follows a discussion → silent relay → judging structure.
 - Target observation and discussion: 2 minutes
 - Each participant relay turn: 3 minutes (unless modified by a bonus-round penalty)
 - Bonus rounds: 2 minutes
 - Winning teams advance through the knockout bracket until the final round.
- Multiple generations are permitted within the allotted time.
- Only the last successfully generated image will be accepted.
- Unsubmitted or unfinished prompts will be discarded when time expires.
- Only organizer-provided systems may be used.
- Network access will be controlled by the organizers solely for operation of the official platform.
- Only the designated image-generation tool is permitted.
- Search engines, reference images, online galleries, cloud storage, messaging platforms, and external AI services are prohibited.
- Notes, sketches, printed references, written instructions, or any communication aids are not permitted during gameplay.
- Any attempt to manipulate the competition process unfairly will result in immediate disciplinary action.

AI AND DATA SCIENCE ENGINEERING

- Competing teams may not exchange information, strategies, prompts, or observations after the official match begins.
- Assistance from spectators, friends, faculty members, or other participants is prohibited.
- The following are considered malpractice:
 - Verbal communication during relay turns
 - Gestures, signals, or screen sharing
 - Leaving written or visual clues for teammates
 - Circumventing bonus-round restrictions
 - Using hidden notes or external prompt sources.
- Participants must follow all instructions issued by coordinators, volunteers, and judges.
- Participants must not tamper with organizer-provided hardware or software settings.
- If an organizer-provided computer malfunctions, coordinators will verify the issue and arrange a replacement or appropriate compensation time.
- Verified platform or network interruptions may result in additional time being granted equal to the affected duration.
- Organizers reserve the right to pause, restart, reschedule, or modify a match if technical or operational circumstances make normal continuation impossible.
- Judges are responsible for evaluating all final submissions according to the published criteria.

AI AND DATA SCIENCE ENGINEERING

FINAL OVERRIDE

A five-stage technical escape mission where teams recover hidden key fragments through media analysis, decoding, AI prompting, and CTF challenges before combining them to unlock the final system.

DESCRIPTION

Final Override is a five-stage technical escape mission where teams must recover hidden key fragments through media analysis, decoding, AI prompting, and CTF-based technical challenges, before combining them to unlock a final system. It is designed for participants from technical backgrounds who enjoy structured problem-solving under time pressure.

Teams progress sequentially through five connected stages, each testing a different technical skill area. As they move forward, they must extract clues from audio and video files, decode encrypted text, craft precise prompts for a locked AI system, solve CTF-style flag-hunt challenges, and finally merge all recovered fragments to complete a last verification task that unlocks the system.

The event tests observation, decoding logic, prompt engineering, technical problem-solving, and integrative reasoning, while also introducing a layer of deliberately misleading clues that challenge participants to think critically rather than rely blindly on tools. It offers strong learning value in digital analysis and AI interaction, along with high entertainment value through its escape-mission format, and is expected to leave participants with a practical understanding of structured technical problem-solving.

EVENT STRUCTURE

Final Override is conducted as a single continuous mission divided into sequential phases. Teams begin by extracting hidden clues from technical stages, progress through decoding and reasoning tasks, and conclude with a final integration challenge that determines their completion time and overall ranking. The event is timed from start to finish, and the winner is determined primarily by the fastest successful completion, supported by a structured evaluation criterion for tie-breaking and quality assessment.

AI AND DATA SCIENCE ENGINEERING

RULES AND REGULATIONS

- Participants from technical academic backgrounds are eligible to participate. Prior expert-level knowledge is not mandatory; however, participants should be comfortable with basic computer use, analytical reasoning, and beginner to intermediate technical tasks.
- Every team must consist of 3 - 4 participants.
- Teams must complete each stage strictly in the given sequence and cannot skip ahead or attempt stages out of order.
- Each participant is expected to bring a personal laptop in working condition, following the BYOD (Bring Your Own Device) format.
- Campus Wi-Fi will be the primary mode of connectivity; personal hotspot may be used only as a backup, with any associated costs borne by the participant.
- AI tools may be used only in stages where explicitly permitted, particularly the Prompt the AI stage; unauthorised AI usage in other stages is a rule violation.
- Participants must not use unrelated external websites, pre-written scripts, or outside collaborators to solve any stage unless specifically permitted.
- No physical materials, printed notes, or external documentation may be used unless explicitly issued by the organisers as part of a stage.
- Any attempt to bypass a stage, manipulate the scoring system, or access unauthorised answers will be treated as a serious violation.
- Sharing answers, hints, or strategies with another competing team is strictly prohibited and will result in disqualification of both teams involved.
- Receiving help from individuals outside the registered team, including online assistance not permitted by event rules, is not allowed.
- Participants must maintain discipline throughout the event and follow all instructions given by organisers, volunteers, and judges.
- Disruptive, disrespectful, or unsportsmanlike behaviour toward organisers or other participants will not be tolerated.

AI AND DATA SCIENCE ENGINEERING

- In case of a participant's laptop malfunctioning, the team must immediately alert the technical support desk; reasonable assistance will be provided, but no guaranteed time extension applies unless the fault is game-system-related.
- Organisers reserve the right to intervene, pause, or adjust any stage if required due to technical, safety, or fairness concerns affecting the overall event.
- Tie-Breakers: If two or more teams record identical or near-identical completion times, the judging criteria table (accuracy, logical approach, and technical adaptability) will be used to determine final ranking.
- Final Decision: All decisions made by the organising committee and judging panel regarding scoring, penalties, disqualification, or ranking are final and binding, and no further appeals will be entertained.

AI AND DATA SCIENCE ENGINEERING

THE LAST TURN

Navigate a maze, face a randomly assigned obstruction, solve puzzles along the way, and find your way to the exit before time runs out.

DESCRIPTION

The Last Turn is an immersive, time-based physical maze competition designed to test how participants navigate uncertainty, solve challenges and adapt under pressure. Rather than being a conventional haunted house or escape room, the event combines maze navigation, short puzzles and competitive time-based progression in a controlled, themed environment.

Before entering the maze, each participant spins the Obstruction Wheel, which assigns a restriction, neutral outcome or limited advantage for their run. Participants then navigate multiple maze sections, make route decisions, reach checkpoints, solve short challenges and manage their assigned condition before completing the final route to the exit.

The event tests observation, problem-solving, decision-making, adaptability, time management and composure under pressure while providing a high-energy and immersive competitive experience. Its unpredictable mechanics and themed environment ensure that each run is different, encouraging participants to think quickly, adapt their strategy and reach the finish as efficiently as possible.

RULES AND REGULATIONS

- The event is open to students from all academic disciplines.
- The Last Turn is an individual competitive event; participants compete individually.
- Participants must complete the mandatory safety briefing before entering the maze.
- Participants must report to their assigned slot on time and follow the instructions provided by the organisers.
- Each participant receives one timed attempt through the maze.
- Before entering the maze, each participant must spin the Obstruction Wheel and follow the assigned restriction, neutral outcome or advantage for that run.

AI AND DATA SCIENCE ENGINEERING

- Participants must remain within the designated maze boundaries and follow the permitted routes and instructions.
- Participants must navigate the maze, reach designated checkpoints and complete the puzzles placed at selected sections.
- Participants must comply with the assigned obstruction throughout the relevant section of the run.
- Participants may use the designated Hint Token system at applicable checkpoints, subject to the associated time cost.
- The official completion time is recorded when the participant crosses the final marker.
- The event will be conducted as a leaderboard-based competition.
- Participants are not required to use personal digital devices as part of the maze gameplay.
- Participants may use only the materials and information provided within the maze and by the organisers for solving the integrated challenges.
- Participants must not bring or use unauthorised external materials to obtain an unfair advantage.
- Participants must complete their runs independently and may not receive assistance from spectators, other participants or unauthorised personnel.
- Participants must not share puzzle solutions, route information or other event- specific assistance with participants whose attempts are yet to take place.
- Participants must not bypass the designated route, obstruction conditions, checkpoints or timing procedures.
- Moving, damaging or tampering with maze structures, props or equipment is prohibited.
- Any deliberate attempt to gain an unfair advantage or manipulate the event mechanics may result in disqualification.
- Participants must follow all instructions given by the organisers, coordinators, volunteers and safety personnel.
- Participants must maintain appropriate discipline and respectful behaviour throughout the event.

AI AND DATA SCIENCE ENGINEERING

- Participants must not intentionally disturb, obstruct or interfere with another participant's run.
- Participants must comply with all venue-specific safety and conduct requirements.
- Participants must not touch, move or tamper with event props, structures or equipment unless explicitly instructed.
- Any issue involving maze structures, timing equipment, lighting, sound, props or other organiser-provided systems must be reported to the event coordinator immediately.
- Organisers may pause, terminate, restart or modify a run if a technical, safety or operational issue materially affects the fairness or safety of the event.
- Any decision regarding time adjustments or alternative arrangements following an organiser-side issue will be made by the event coordinators.
- Participants are ranked primarily on their adjusted completion time, with the announced scoring system also considering puzzle completion, hint usage and obstruction management.
- If conducted as a multi-stage competition, participants who meet the announced qualification criteria will progress to subsequent rounds.
- Judges and event coordinators have the authority to verify timings, evaluate performance and make decisions regarding rule violations.
- The uploaded The Last Turn proposal does not currently specify a formal tie- breaker mechanism. The organisers should finalize and announce the tie-breaker procedure before the event.
- All decisions of the judging panel and event organisers regarding scoring, penalties, qualification, disqualification and final ranking shall be final and binding.

ELECTRONICS AND COMMUNICATION ENGINEERING

INFINITY: CODE RED

Find the Fragments. Unlock the Impossible.

DESCRIPTION

Code Red is an immersive, Marvel-themed flagship event blending a fast-paced treasure hunt with a high-pressure escape room. Teams of 4 must solve thematic puzzles, decode hidden clues, and race through a campus-wide hunt. Only the top four teams will advance to the final escape room to extract the Infinity Core before time runs out. Step up, assemble your squad, and test your logic under pressure!

EVENT STRUCTURE

Stage 1 : The infinity hunt(50 mins with 5 checkpoints , top 6 teams advance)

Stage 2 : The infinity escape (50 mins, 5 level parallel rooms in 3 batches)

Final bonus round to declare winners

RULES AND REGULATIONS

- Teams of 4 members. Must carry college IDs.
- Timing: Arrive 15 minutes prior to start time.
- Fair Play: No electronics (phones/smartwatches), no sharing clues, no physical locking, and no force-opening props.
- Disqualification: Cheating, prop damage, or misconduct results in an immediate ban.

POC DETAILS

Student POC: Melvin S Jacob (9380257221)

ELECTRONICS AND COMMUNICATION ENGINEERING

ANTRIX

Shape the Wave. Define the Future

DESCRIPTION

ANTRIX is a one-day technical design challenge that combines learning and competition, giving participants hands-on experience in antenna design, simulation, and testing using the ANSYS Electronics Suite (HFSS). Participants begin by learning the fundamentals of antenna theory and simulation through expert-led sessions and guided practice. They then apply their knowledge in a competitive antenna design challenge, where accuracy, innovation, and efficiency under time constraints determine the winners. The event aims to develop practical, industry-relevant simulation skills while encouraging problem-solving and technical creativity. Expected outcomes include hands-on ANSYS HFSS training, real-world exposure to antenna design and analysis, participation and winner certificates, mentorship from faculty experts, and an opportunity to showcase skills in a competitive environment.

EVENT STRUCTURE

- Reporting & Registration (9:00 – 9:25 AM): participants report to the venue, complete on-site verification with their college ID, and receive their system and seat allotment.
- Inauguration & Briefing (9:25 – 9:30 AM): a short welcome, an overview of the event flow, a walkthrough of the rules, and the lab-safety guidelines.
- Learning Session on Antenna Design (9:30 AM – 12:30 PM): an expert-led, hands-on training session on the ANSYS Electronics Suite (HFSS) with guided practice, covering the following topics:
 - Basics of Antenna Theory
 - Introduction to ANSYS HFSS
 - Simulation of Microstrip Patch Antenna and Horn Antenna
 - Circularly Polarised Antennas
 - Parameter Optimization and Simulation
 - Understanding Gain, Return Loss and Radiation Patterns
- Break (12:30 – 1:30 PM): systems are reset and the competition problem statement is prepared and loaded.
- Problem Statement Release (1:30 PM): the antenna design problem statement, along with the target performance metrics, is revealed to all teams simultaneously.

ELECTRONICS AND COMMUNICATION ENGINEERING

- Antenna Design Competition (1:30 – 4:30 PM): teams apply the concepts learned to design and simulate the given antenna using ANSYS HFSS within the allotted time; the most accurate results (closest to the target performance metrics) win.
- Evaluation & Results (from 4:30 PM): submissions are evaluated on simulation accuracy, design approach and time of completion; winners are announced and certificates are awarded to all participants.

RULES AND REGULATIONS

- A team may have a maximum of 2 members
- Participation is limited to 60 participants; seats are allotted strictly on a first-come, first-served basis.
- Attendance for the full learning session is mandatory; only participants who complete it qualify for the competition.
- Each team will be provided with a system and licensed ANSYS (HFSS) software access; teams must use only the system allotted to them.
- The competition problem statement, along with the target performance metrics, will be revealed only at the start of the competition; no prior hints will be shared.
- All design and simulation work must be carried out during the competition using ANSYS HFSS; external design files, pre-made models or pre-built projects are strictly not allowed.
- Use of the internet, mobile phones, external storage devices or any inter-team communication is not permitted during the competition unless expressly allowed by the coordinators.
- Teams must save and submit their design files and simulation results in the specified format before the announced deadline; late submissions will not be evaluated.
- Designs are judged on simulation accuracy (gain, return loss, bandwidth), design approach and documentation, and time of completion, as per the Judging Criteria.
- Any form of malpractice, plagiarism or tampering with another team's work will lead to immediate disqualification.
- Participants must handle all lab equipment and systems with care; any intentional damage will be the participant's responsibility.

ELECTRONICS AND COMMUNICATION ENGINEERING

- The judges' decisions on evaluation and results are final and binding.
- Certificates will be awarded to all participants; winners will receive prizes as listed under Winners & Prizes.
- Volunteers and faculty will be present throughout to assist with technical or procedural queries.
- The organizers reserve the right to modify the schedule or rules if necessary; any changes will be communicated to participants in advance.

ELECTRONICS AND COMMUNICATION ENGINEERING

BITFORGE

The code is flawed. The clock is ticking. Bring the logic to life.

DESCRIPTION

BitForge is a high-energy, multi-round digital logic and hardware engineering challenge designed to bridge the gap between theoretical concepts and practical execution. The event tests number system conversions, logic gate optimization, cryptographic problem-solving, and live hardware prototyping.

Starting with a fast-paced cryptographic and riddle-based paper sprint, teams must decode a chain of interlinked puzzles — hexadecimal riddles, direction-finding clues, and a logic gate maze — before moving on to a three-stage classical cryptography round covering Caesar, Vigenère, and Playfair ciphers.

Finalist teams then bring abstract logic to life by manually wiring physical Digital IC Trainer Kits under a ticking clock, before the grand finale challenges them to solve a sequence of deduction, decoding, and logic puzzles.

The event has a low barrier to entry but a high skill ceiling, making it challenging for engineering students while remaining intuitive and playable.

EVENT STRUCTURE

The event consists of a 4-round eliminator structure. Teams progress by successfully completing the technical objectives within the allocated timeframes. All necessary baseline principles are provided in a specialized "Hacker's Cheat Sheet" at the start, ensuring that logic and execution triumph over mere memorization.

Reporting & Registration: Participants report to the venue, complete on-site verification with their college/school ID, and receive their team allotment and seating.

Inauguration & Briefing: A short welcome, an overview of the competition flow, distribution of the Hacker's Cheat Sheet, a walkthrough of the rules, and lab-safety guidelines for the hardware round.

ELECTRONICS AND COMMUNICATION ENGINEERING

RULES AND REGULATIONS

- Each team must consist of 3 participants.
- Participants must arrive at the designated venue before the official commencement time and complete on-site verification with a valid college/school ID.
- Late arrivals must strictly follow organizer directives; seats are allotted on a first-come, first-served basis.
- All teams receive identical problem criteria and schematics for each round.
- Teams must complete challenges in the sequence mandated by the organizers, including all sub-rounds of Round 1 and Round 2.
- The Round 1 Crypto Key and Direction, and the Round 2 chained cipher outputs, must each be derived independently by the team. Obtaining keys or intermediate values from another team will result in disqualification.
- Solutions for Rounds 1, 2, and 4 will be revealed entirely at the conclusion of the event. Round 3 circuits will be verified live during the round itself.
- Final circuit configurations in Round 3 must be justified by the team's truth-table, Boolean algebra, K-Map, and gate-selection working. Arbitrary guessing or trial-and-error switch flipping will result in round penalization.
- Gate purchases in Round 3 are final and non-refundable. Unnecessary or inefficient gate purchases increase the team's total circuit cost. Among correct circuits, teams will be ranked by total credits spent, with submission time used as the tie-breaker.
- Laptops are not required. The use of internet-connected devices, smartwatches, or AI tools is strictly prohibited unless explicitly authorized by the organizers.
- Teams may carry baseline stationery for recording variables, riddle answers, and tracking logic and cipher states.
- Cheating, copying another team's work, or discussing solutions or keys across team boundaries will result in immediate disqualification.
- Participants must handle the Digital IC Trainer Kits and IC chips responsibly. Deliberate damage, misuse, or alteration of experimental components will result in disqualification.
- The organizers reserve the right to modify the schedule, riddles, or rules if necessary. Any such changes will be communicated to participants in advance.
- The judges' decisions regarding evaluation and results are final and binding.

ELECTRICAL AND ELECTRONICS ENGINEERING

GRIDLOCK

A power-grid simulation challenge where teams design, operate and stabilize a grid through changing generation, load and system contingencies.

DESCRIPTION

GRIDLOCK is a software-based power-system competition in which teams design and operate a simulated electrical grid under changing generation, demand and system conditions. Teams receive a common grid scenario containing generation sources, lines, transformers, loads and operating limits, along with the required technical data. In the first stage, teams develop and validate a working grid model using an approved power-system simulation platform. They must ensure that generation meets demand while maintaining acceptable voltage levels, line loading and supply to critical loads. In the second stage, the operating conditions change through controlled grid contingencies such as renewable-generation reduction, line outages, generator failures and load changes. Teams must respond within limited time and restore or maintain secure operation. The event develops power-system analysis, grid operation, contingency management, decision-making and practical engineering skills.

EVENT STRUCTURE

ROUND 1 – GRID DESIGN & SIMULATION

All participating teams receive the same grid scenario and technical data. The scenario may include multiple generation sources, transmission/distribution lines, transformers and different classes of loads such as hospitals, water supply, residential demand, industry and EV charging. Teams must construct the grid model using an approved power-system simulation platform and achieve a valid base operating condition. They must check generation-demand balance, bus voltages, line loading and critical-load supply. Teams submit their model and required simulation results within the allotted time.

ROUND 2 – GRID CRISIS

Teams begin with their validated base grid and are then subjected to a sequence of controlled contingencies. Possible events include a reduction in solar generation, loss of a transmission line, generator outage, increase in demand or restrictions on critical-load shedding. Teams receive a limited time for each contingency and must modify their grid operation or control strategy to maintain secure supply. Their response may involve generation redispatch, rerouting of power, controlled load shedding or other technically justified actions. Each scenario is evaluated using measurable system performance parameters.

ELECTRICAL AND ELECTRONICS ENGINEERING

RULES AND REGULATIONS

- Each team shall consist of 2-4 participants.
- All teams must work on the common grid scenario and technical data provided by the organizers.
- Teams must complete each round within the time limit specified by the organizers.
- Teams may use any simulation platform approved by the organizers; no particular software platform is mandatory. (Laptop mandatory with internet connectivity)
- Teams must use the system ratings, generation limits, load values, line ratings, transformer ratings and other parameters provided in the problem statement.
- Teams must submit their grid model and required results in the format specified by the organizers.
- Round 1 qualification and scoring will be based on the performance of the base grid according to the announced judging criteria.
- In Round 2, teams must respond to each contingency within the allotted response time.
- Contingencies will be selected and administered by the organizers. Teams will not be informed of the next contingency in advance.
- Teams must not alter the problem statement, system ratings or predefined constraints unless explicitly instructed by the organizers.
- Any generation redispatch, load shedding, network reconfiguration or control action must remain within the permitted operating limits.
- Critical loads identified by the organizers must be maintained unless the particular contingency explicitly permits otherwise.
- Teams must not use unauthorized external assistance, pre-built models or information not permitted by the organizers.
- Teams must be prepared to explain their operating decisions and justify how their response maintains or restores grid security.
- Any malpractice, unauthorized modification of the model or violation of event rules may result in penalty or disqualification.
- Judges' decisions regarding scoring, qualification and final rankings shall be final.

ELECTRICAL AND ELECTRONICS ENGINEERING

POWERWIZ

A two stage power electronics challenge combining converter design, simulation, hardware implementation, and performance testing.

DESCRIPTION

POWER ELECTRONICS DESIGN CHALLENGE is a hands-on technical competition that challenges participants to design, simulate and physically implement a power-electronic converter against a common engineering specification. The event begins with a Design & Simulate round, where teams receive a defined electrical requirement and develop an appropriate converter design within a limited time. Their design is validated through simulation and evaluated primarily on technical correctness, specification compliance and simulated performance, with completion time used as a tie-breaker where required. The best-performing teams then advance to the Build & Test round, where organizers provide the required hardware components and laboratory equipment. Teams construct their converter and subject it to standardized electrical tests. The event aims to develop practical power-electronics design skills, simulation ability, troubleshooting, hardware implementation and performance optimization.

EVENT STRUCTURE

ROUND 1 – DESIGN & SIMULATE

- All participating teams will receive a common power-electronics problem statement with defined electrical requirements and hardware constraints.
- Teams will analyse the requirements and design a suitable power-electronic converter within the allotted time.
- Teams must perform the necessary design calculations and component selection based on the hardware constraints provided by the organizers.
- Teams will develop and validate their design using an approved simulation platform.
- The simulated design must demonstrate compliance with the specified requirements, including parameters such as input voltage, output voltage, power rating and other performance requirements given in the problem statement.
- Teams must submit their circuit design, calculations and simulation results before the Round 1 deadline.
- Teams will be evaluated primarily on technical correctness, specification compliance and simulated performance, with completion time used as a tie-breaker where necessary.
- The top five teams will qualify for the hardware round.

ELECTRICAL AND ELECTRONICS ENGINEERING

ROUND 2 – BUILD & TEST

- The shortlisted teams will receive the hardware components and laboratory equipment specified by the organizers.
- The components will be subject to the quantity, rating and availability constraints provided during Round 1.
- Teams must construct the converter based on the design developed during the Design & Simulate round.
- Teams may troubleshoot and optimize their implementation within the allotted time while remaining within the permitted hardware constraints.
- Each completed prototype will undergo a standardized testing procedure under the same conditions for all teams.
- Performance will be evaluated using measurable parameters such as output voltage regulation, efficiency, load performance, stability and overall hardware implementation.
- The teams with the highest-performing prototypes will be awarded 1st, 2nd and 3rd places.

RULES AND REGULATIONS

- Each team shall consist of 2-4 participants.
- All teams must work on the common power-electronics problem statement provided by the organizers.
- Round 1 must be completed within the time limit specified by the organizers.
- Teams may use any approved simulation platform; no particular software platform is mandatory. (Laptop mandatory with internet connectivity)
- Teams must submit their circuit design, calculations and simulation results in the format specified by the organizers.
- Round 1 qualification will be based primarily on technical correctness, specification compliance and simulated performance. Completion time may be used as a tie-breaker.
- Only the top five teams from Round 1 will qualify for Round 2, unless otherwise announced by the organizers.
- The hardware components provided for Round 2 will be subject to predefined quantity, rating and component-availability constraints. Teams must consider these constraints while developing their design and simulation in Round 1.
- Component selection, major design decisions and required calculations must be completed during Round 1 based on the hardware constraints provided by the organizers. Teams must ensure that their simulated design can be implemented using the available hardware.

ELECTRICAL AND ELECTRONICS ENGINEERING

- In Round 2, teams shall use only the hardware components and laboratory equipment provided or approved by the organizers.
- Components may not be borrowed, exchanged or taken from another team.
- Teams must follow all electrical and laboratory safety instructions while constructing and testing their prototypes.
- Teams must not intentionally damage, misuse or modify laboratory equipment beyond the permitted construction requirements.
- All hardware construction, testing, troubleshooting and optimization must be completed within the allotted time.
- The final prototype will be tested under standardized conditions specified by the organizers.
- External assistance, unauthorized components, pre-built converter modules or pre-built solutions are not permitted unless explicitly approved by the organizers.
- Teams must be prepared to explain their design choices, calculations, simulation results and hardware implementation to the judges.
- Any unsafe operation, malpractice or violation of the event rules may result in penalty or disqualification.
- Judges' decisions regarding qualification, performance scores and final rankings shall be final.

ELECTRICAL AND ELECTRONICS ENGINEERING

EVMOTION 26

A three-stage EV challenge combining ADAS simulation, complete vehicle design, and hands-on prototype development.

DESCRIPTION

EVMOTION 26 is an interdisciplinary technical competition that challenges participants to take an electric vehicle concept from problem identification to simulation, complete system design and physical implementation. All teams receive a common set of fixed technical constraints based on the hardware platform available to the organizers, while each team is assigned a different real-world EV application such as indoor mobility, industrial utility, campus transportation or assistive mobility. The event consists of three progressive rounds: ADAS SIMULATION, where teams develop an application-specific ADAS feature using offline simulation; EV DESIGN & PITCH, where teams design and defend the complete EV concept; and EV BUILD, where selected finalist teams implement their design using the organizer-provided hardware. The event aims to develop EV engineering, electrical and electronic systems thinking, control and software skills, mechanical design, problem-solving, innovation and practical implementation.

EVENT STRUCTURE

Round 1 – ADAS SIMULATION: Think. Simulate. Solve.

Each team is assigned an EV application and must develop one suitable Advanced Driver Assistance System (ADAS) feature using an offline simulation environment. Depending on the assigned application, teams may implement features such as adaptive cruise control, collision avoidance, automatic emergency braking, obstacle detection, path following or speed control. Teams must demonstrate the working logic through simulation and explain how the feature satisfies the given vehicle requirements. The top 12 teams qualify for the next round.

Round 2 – EV DESIGN & PITCH: Design. Integrate. Defend.

The qualified teams must design the complete EV around their assigned application and the fixed technical constraints provided at the beginning of the event. The design must cover the vehicle architecture, chassis concept, drivetrain, motor and controller integration, battery placement, sensors, control system, ADAS integration, safety considerations and expected performance. Teams then pitch their complete EV concept to the judging panel and defend their engineering decisions through technical questions. The top 5-6 teams qualify for the final round.

ELECTRICAL AND ELECTRONICS ENGINEERING

Round 3 – EV BUILD: Build. Integrate. Demonstrate.

The top 5-6 teams receive access to the organizer-provided hardware platform specified by the original constraints. Teams must convert their proposed EV design into a working physical prototype by integrating the provided motor, controller, battery, sensors and other permitted components. The final vehicle is tested for basic mobility, control, ADAS response, stability, application-specific performance and overall compliance with the original problem statement.

RULES AND REGULATIONS

- Each team shall consist of 2-4 participants.
- All participants must complete registration and report before the specified event start time.
- Teams must participate in all rounds for which they qualify. Progression to subsequent rounds will be based on the scores and selection criteria announced by the organizers.
- Every team will receive an application-specific EV problem statement. Problem statements may differ between teams, but the technical constraints applicable to the hardware platform shall be fixed by the organizers.
- Teams must design their solution within all dimensional, electrical, mechanical, software and safety constraints specified in the problem statement. (Laptop mandatory with internet connectivity)
- During Round 1, teams must implement their ADAS feature using the simulation environment and resources permitted by the organizers.
- Teams must submit or demonstrate the required simulation files, control logic and technical explanation within the allotted time.
- During Round 2, teams must present and defend a complete EV concept covering the mechanical, electrical, control, software, ADAS and application aspects of the vehicle.
- Teams must be able to justify their design decisions and respond to technical questions from the judging panel.
- Only qualified finalist teams will receive access to the physical hardware platform for Round 3.

ELECTRICAL AND ELECTRONICS ENGINEERING

- During Round 3, teams must use only the hardware, components and resources provided or explicitly permitted by the organizers.
- Unauthorized external motors, controllers, batteries, major drivetrain components or pre-built vehicle systems are not permitted unless explicitly approved by the organizers.
- All construction, programming, testing and debugging must be completed within the allotted time for the respective round.
- Teams must not tamper with, damage, modify or interfere with equipment assigned to another team.
- Teams must not receive assistance from participants, faculty or external persons who are not officially authorized by the organizers.
- Participants must not disclose problem statements, simulation scenarios, design information or final-round challenge details to teams that have not yet attempted the relevant round.
- All electrical connections, batteries, tools and fabrication equipment must be operated safely and only as instructed by the organizers.
- Any unsafe operation, intentional damage, unauthorized material, malpractice or violation of event instructions may result in penalty or disqualification.
- Judges may inspect the team's calculations, simulation files, design files, code, electrical connections, prototype and working procedure whenever required.
- The final prototype/system must demonstrate the required core functionality during the designated evaluation period.

CIVIL ENGINEERING

ARCHICRAFT 2.0

A time-bound AutoCAD design challenge where participants transform a real-world planning brief into creative, functional, and technically precise designs.

DESCRIPTION

Archicraft 2.0 is the third edition of the department's flagship AutoCAD design competition, returning after two successful earlier runs. Participants are handed a real-world civil/architectural planning brief on the spot and must translate it into a complete, functional design within a fixed time window using AutoCAD. The event tests conceptual planning, drafting speed, spatial creativity, and technical precision under pressure. It gives budding designers a platform to demonstrate how efficiently and creatively they can turn a brief into a buildable plan, while exposing them to the kind of time-bound problem solving expected in real design practice. Winners are chosen on the basis of the design that best balances creativity with technical efficiency.

EVENT STRUCTURE

- Participants report to the AutoCAD lab at the scheduled time and are briefed on the design problem.
- A planning/design brief (site layout, building plan, or structural drawing task) is revealed at the start of the round.
- Participants have a fixed time limit (3 hours) to complete the design in AutoCAD.
- Completed drawings are submitted digitally at the end of the round for evaluation.
- A panel of faculty/industry judges shortlists and scores the top entries; winners are announced after judging.

CIVIL ENGINEERING

RULES AND REGULATIONS

- Only AutoCAD (as provided in the lab) may be used; use of any other design software is not allowed.
- Reference material, internet access, and pre-made templates/blocks are not permitted during the round.
- The design brief will be disclosed only at the start of the event.
- Entries must be submitted within the allotted time; late submissions will not be evaluated.
- Any form of plagiarism or use of a pre-prepared design will lead to immediate disqualification.
- Decisions of the judging panel are final and binding.

CIVIL ENGINEERING

SEISMOGAMI

Shake It, Don't Break It – A hands-on challenge where participants build structures that withstand simulated earthquakes.

DESCRIPTION

Teams are challenged to design and construct a scaled building model using only ice-cream sticks and adhesive, applying core principles of structural and seismic engineering. Completed models are tested on a simulated shake table subjected to increasing seismic frequencies, and the team whose structure withstands the vibrations the longest without collapsing is declared the winner. The event gives students hands-on exposure to structural mechanics, load distribution, and earthquake-resistant design, blending engineering theory with a competitive, build-and-test format.

EVENT STRUCTURE

- Teams register and receive a fixed kit of ice-cream sticks and adhesive along with base dimension/height constraints.
- Teams are given a set construction time to design and build their earthquake-resistant model.
- Completed models are inspected for compliance with size, weight and material constraints.
- Each model is mounted on a simulated shake table and subjected to progressively increasing seismic frequencies.
- The model that withstands the vibrations for the longest duration without structural failure wins.

CIVIL ENGINEERING

RULES AND REGULATIONS

- Only ice-cream sticks and the adhesive provided by the organisers may be used for construction.
- Models must conform to the specified base area and maximum height limits.
- No additional reinforcing material (wire, tape, thread, etc.) is permitted unless explicitly allowed.
- Construction must be completed within the allotted build time; incomplete models will be tested as-is.
- The winner is determined by the longest survival time on the shake table before visible structural failure.
- In case of a tie, the model that survives the highest seismic frequency will be ranked higher.
- The organisers' decision on structural failure and test results is final.

CIVIL ENGINEERING

ECOFORGE 2.0

Waste to Wonder – A creative challenge where participants transform waste materials into useful and innovative products.

DESCRIPTION

Ecoforge 2.0 is the second edition of the department's popular sustainability-driven craft competition. Teams are provided with a set of waste materials and must creatively construct a specific item or structure assigned to them on the spot, promoting resourcefulness and environmental consciousness. Each material carries a fixed point value, and points are deducted from a team's base score according to the materials used, rewarding efficient and minimal use of resources. As a returning event, past participants are given a slight weightage advantage in the time allotted, recognising their prior experience while keeping the competition welcoming to newcomers.

EVENT STRUCTURE

- Teams register and are briefed on the item/structure they must create using waste materials.
- Each team is given access to a common pool of waste materials, each carrying a fixed point value.
- Teams have a fixed time to design and build the assigned item; returning (past-year) participants are given a small time-weightage adjustment.
- Every material used is recorded, and its corresponding points are deducted from the team's base score.
- Final scores (base score minus material-usage deductions, plus creativity/task-accuracy marks) determine the winner.

CIVIL ENGINEERING

RULES AND REGULATIONS

- Only materials provided by the organisers may be used; outside materials are not permitted.
- Each material used will incur a point deduction as per the pre-declared points list.
- Teams with past Ecoforge participants will receive a small additional time allowance, as declared before the round.
- The finished item must match the assigned brief/theme to qualify for full marks.
- Work must be completed within the allotted time; incomplete entries will be judged as submitted.
- Any damage to venue property or unsafe handling of materials will lead to disqualification.
- Judges' scoring decision is final.

RC ROBO SOCCER

Control, compete, and score your way to victory with your own football-playing robot.

DESCRIPTION

The Department of Mechanical is thrilled to present RC Robosoccer. RC RoboSoccer is a robot-based soccer competition where teams build and program robots to play soccer on a defined field. The objective is to score goals against the opposing team within a set time. Robots must follow specific size and weight guidelines. Matches are divided into halves, and robots can operate autonomously or semi-autonomously. Teams earn points by scoring goals, and penalties are given for fouls or rule violations. The event emphasises technical skills in robotics, programming, and strategic gameplay, making it a challenging and exciting test of engineering prowess.

RULES AND REGULATIONS

TEAM RULES

- Each team must consist of 4-6 members.
- All participants must carry a valid college ID card.
- Only registered team members are allowed to participate.

ROBOT RULES

- One robot per Team.
- Robots must be wirelessly controlled.
- Robots must fit within 30 cm(W) × 40 cm(H) including wheels.
- Maximum robot weight: 6kg with external battery, 8kg with Internal battery.
- Maximum operating voltage: 12 V.
- Robots must not have sharp or dangerous elements.

MECHANICAL ENGINEERING

- Wheels that can damage the arena are not permitted.
- No mechanisms designed to grab, lift, carry, or trap the ball.
- No mechanisms intended to damage or deliberately immobilize an opponent's robot.
- Only wheels/driving mechanisms are permitted; no additional moving mechanisms.
- Robots must pass the technical inspection before participating.

MATCH RULES

- Each match consists of two 5-minute halves with a 2-minute half-time break.
- A maximum of 2 robots per team may be on the field.
- The team scoring the most goals wins.
- In case of a draw in knockout rounds, a tie-breaker/penalty shootout will be conducted.
- The referee's decision will be final and binding.
- Ball & Arena
- Ball: Golf ball
- Ball Diameter: 45 mm
- Ball Weight: 45 g

DISQUALIFICATION

A team may be disqualified for:

- Violating robot specifications.
- Using prohibited mechanisms.
- Deliberately damaging another robot or the arena.
- Interfering with the opponent's robot or match.
- Misconduct or failure to follow the organizers' instructions.

MECHANICAL ENGINEERING

BOT WARS

Put your combat robot to the test in an intense battle of strategy, power, and control

DESCRIPTION

BOT WARS 2026 (Robo War) is a high-intensity robot combat competition where teams put their custom-built combat robots to the ultimate test. Participants will battle their opponents inside a controlled arena using strategically designed robots equipped with permitted offensive and defensive mechanisms. The event tests engineering, strategy, control, reaction time, and robot durability in an exciting head-to-head competition. Teams must outmanoeuvre their opponents, withstand attacks, and strategically use their robot's capabilities to gain the upper hand. With elimination-based battles leading to the final showdown, only the strongest and most strategic robot will emerge victorious.

EVENT STRUCTURE

- Knockout-based tournament
- 1 vs 1 robot battles
- One robot per team will participate in a match.
- The winner advances to the next round.
- The final surviving team will be declared the ROBO WAR 2026 Champion.
- In case of a draw, a tie-breaker round will be conducted.

MECHANICAL ENGINEERING

RULES AND REGULATIONS

- Ram/pushing mechanisms
- Other mechanisms approved by the organizers
- Both robots must be positioned in their designated starting zones.
- The match begins only after the referee gives the start signal.
- Teams must control their robots only from the designated control area.
- A robot is considered defeated if it:
 - Becomes immobilized.
 - Is unable to continue the match.
 - Is knocked out of the designated arena.
 - Is declared defeated by the referee.
- Deliberate attacks on the arena structure are prohibited.
- Teams must stop their robot immediately when instructed by the referee.
- The referee's decision will be final and binding.
- Maximum weight 10kgs (Including battery)
- Maximum dimensions 300 * 300 * 400 (Length*Breadth*Height)
- Control Wireless (remote control) ONLY
- Power source Battery 24V max *Battery must commercially be manufactured with proper protection & Only 1 battery permitted in the bot not more than 1
- Match duration 3-5mins
- No projectiles explosives flames liquids or hazardous chemicals

MECHANICAL ENGINEERING

DRONE MAZE CHALLENGE

Navigate a challenging obstacle course with precision, speed, and expert drone control.

DESCRIPTION

Drone Maze Challenge 2026 is a high-intensity drone navigation competition designed to test precision, control, reflexes, and piloting skills. Participants must navigate their drones through a specially designed obstacle maze consisting of gates, hoops, narrow passages, turns, and restricted flight sections. The objective is to complete the designated course in the shortest possible time while avoiding obstacles and penalties. The event provides participants with an exciting platform to demonstrate their drone-handling abilities, spatial awareness, reaction time, and control precision. It also promotes interest in unmanned aerial systems and hands-on technology while providing an entertaining and competitive experience for students from different colleges.

EVENT STRUCTURE

QUALIFICATION ROUND

- All registered teams participate in Round 1.
- The course will consist of simple obstacles designed to test basic drone control, navigation, and precision.
- Each team will be given two timed attempts.
- The better valid time of the two attempts will be considered as the team's Round 1 score.
- Teams must pass through all designated checkpoints in the specified sequence.
- Touching an obstacle will result in a time penalty.
- Skipping or bypassing a checkpoint/obstacle may result in a penalty or disqualification of that attempt.
- Teams/drone that fail to complete an attempt due to a technical failure may use their second attempt.
- The teams with the best scores will qualify for Round 2.

KNOCKOUT ROUND

- Only the teams qualifying from Round 1 will participate.
- The course will contain more complex obstacles, narrower passages, sharper turns, and increased precision requirements.

MECHANICAL ENGINEERING

- Each qualifying team will receive two timed attempts.
- The better valid time will be considered for the Round 2 ranking.
- The number of teams advancing to the Final will be determined based on the fastest penalty-adjusted times.
- Knockout/elimination begins from this round.
- Teams failing to qualify for the required cutoff will be eliminated from the competition.

FINAL ROUND

- Only the finalists from Round 2 will participate.
- The Final course will contain the most challenging combination of obstacles, requiring high levels of speed, precision, control, and reaction.
- Each finalist will receive two timed attempts.
- The better valid time will be considered for the Final ranking.
- The final score will be based on the completion time plus applicable penalties.
- The participant/team achieving the fastest penalty-adjusted valid time will be declared the winner.

RULES AND REGULATIONS

TEAM RULES

- Each team can consist of max 4 members.
- Each team must nominate one designated pilot.
- Only the registered pilot is allowed to control the drone during a run.
- All team members must carry a valid college ID card.
- Participants must report to the venue at their allotted time.
- Teams must comply with all instructions issued by the event officials and safety personnel.

DRONE RULES

- Participants must bring their own drone.
- The drone must be suitable for indoor flight and must meet the specifications announced by the organizers.
- The drone must be in safe working condition before the run.
- Drones with exposed sharp parts or damaged components will not be allowed.
- Propeller guards are recommended/required for safety.

MECHANICAL ENGINEERING

- Participants must bring their own controller, batteries, charger and necessary accessories.
- All drones must pass the technical and safety inspection before participating.
- Only approved drones will be permitted inside the competition arena.
- The drone's operating frequency/transmission equipment must comply with applicable Indian regulations and must not interfere with other participants' equipment.

COMPETITION RULES

- Each participant will get two attempts in each round.
- The drone must start from the designated START point.
- Participants must navigate through the maze in the specified sequence.
- All gates and checkpoints must be crossed.
- The drone must remain within the designated flight area.
- Touching an obstacle will result in a time penalty.
- Skipping or bypassing an obstacle will result in a penalty or disqualification.
- The drone must cross the designated FINISH point to complete the run.
- The final score will be based on the completion time plus applicable penalties.
- The participant/team with the lowest final time will be ranked highest.

SAFETY RULES

- Each participant will get two attempts in each round.
- The drone must start from the designated START point.
- Participants must navigate through the maze in the specified sequence.
- All gates and checkpoints must be crossed.
- The drone must remain within the designated flight area.
- Touching an obstacle will result in a time penalty.
- Skipping or bypassing an obstacle will result in a penalty or disqualification.
- The drone must cross the designated FINISH point to complete the run.
- The final score will be based on the completion time plus applicable penalties.
- The participant/team with the lowest final time will be ranked highest.

AUTOMOTIVE TECHNOLOGY

APEX STRATEGY

Develop and execute winning F1 race strategies using data, pit stops, telemetry, and quick decision-making.

DESCRIPTION

Apex Strategy is a technical motorsport engineering competition that challenges participants to step into the role of Formula 1 Race Engineers. The event bridges theoretical strategy with real-time execution using an official Formula 1 Video Game. In Phase 1, teams are provided with a race setup dataset including track length, tire degradation profiles, pit lane loss time, fuel consumption rates, and weather forecasts to formulate an optimal stint and pit stop strategy. In Phase 2, these strategies are put to the test in a controlled in-game race scenario. Real-time telemetry (telemetry screen / UDP dashboard output displaying speed, tire wear, fuel levels, and lap deltas) is monitored by the teams as they make pit calls. The competition tests data analysis, decision-making under pressure, and dynamic adaptability.

EVENT STRUCTURE

ROUND 1 THE STRATEGY ROOM:

Every team receives identical track specifications, tire compound characteristics, fuel usage metrics, and weather probability reports for a 25% or 50% distance race in the F1 game. Teams calculate stint lengths, tire compound choices, and planned pit stop windows to submit their official Strategy Sheet.

ROUND 2 IN-GAME RACE EXECUTION:

Qualified teams run their planned strategy in an F1 game environment (set up with standardized car performance, AI difficulty, weather settings, and assists). To ensure fair judging and eliminate driver skill bias, the driving is handled by a standardized designated driver or fixed AI baseline, executing the precise pit calls commanded by each team's "Pit Wall." Teams monitor the in-game telemetry/dashboard to manage tire wear and lap deltas.

ROUND 3 THE PIT WALL TWIST (DYNAMIC ADAPTABILITY) :

Midway through the simulated race, dynamic variables occur (e.g., a Safety Car deployment, sudden rain, or virtual safety car). Teams get a short window to calculate and execute a modified pit stop strategy on the fly.

AUTOMOTIVE TECHNOLOGY

RULES AND REGULATIONS

- Teams must consist of 2 to 5 registered members.
- Teams must register online before the deadline.
- Every participant must carry a valid student ID card.
- Strategy sheets for Round 1 must be submitted before the countdown timer expires.
- All game sessions will run identical settings (same track, equal car performance, standardized assists, and identical weather presets) to guarantee an unbiased competition field.
- Driving controls are strictly standardized or operated by an organizer driver following the team's live pit commands, ensuring the event measures strategy quality rather than gaming skills.
- Use of unauthorized external automation tools outside provided spreadsheet/calculation sheets is strictly prohibited.
- Unsportsmanlike behaviour (verbal abuse, intentional disruption, unfair tactics) will result in disqualification.
- Judges' and referees' decisions will be final and binding.

AUTOMOTIVE TECHNOLOGY

MUD RUN: RC OFF-ROAD CHALLENGE

Race your RC vehicle through challenging off road obstacles, where speed, skill, and precision decide the winner.

DESCRIPTION

MUD RUN – RC Off-Road Challenge is an adrenaline-fuelled off-road racing experience that puts precision, control, and driving skill to the ultimate test.

Participants will take on a specially engineered off-road arena featuring mud pits, rock gardens, ramps, uneven terrain, bridges, tight turns, and challenging technical sections, with every obstacle demanding a different approach.

The objective is simple: conquer the terrain and complete the course in the shortest possible time. But speed alone won't be enough—every turn, climb, jump, and obstacle will test the driver's concentration, control, and ability to master their machine. Penalties for collisions and missed sections will ensure that precision is just as important as pace.

Designed to bring the excitement of off-road motorsport to the college arena, MUD RUN promises an immersive and highly competitive experience for both participants and spectators. The event aims to ignite an interest in automobiles and motorsport while encouraging teamwork, confidence, strategic thinking, and skilled vehicle handling—turning every lap into a battle between speed, skill, and terrain.

EVENT STRUCTURE

TRIAL LAP

- Each team will be given 1 trial lap on the track.
- This lap will not be officially timed but will help participants familiarize themselves with the terrain and obstacles.

QUALIFYING ROUNDS.

- Each team will attempt 3 timed laps (1 lap = 1 round).
- The best lap time out of the 3 rounds will be considered for qualification into the finals.

FINALS

- The top teams (based on participation) will qualify for the finals.
- Each finalist will attempt 2 timed laps in the finals.
- The best lap time in the finals will decide the winner.
- In case of a tie, an additional tie-breaker lap will be conducted.

AUTOMOTIVE TECHNOLOGY

RULES AND REGULATIONS

- General Rules (Code of Conduct, Participation, Fair Play)
- Each team can have 2–5 members (students from different institutes can team up).
- Every participant must carry a valid student ID card.
- Teams must register online before the deadline
- The RC car will be checked by organizers before the competition for compliance.
- Unsportsmanlike behaviour (verbal abuse, intentional disruption, unfair tactics) will result in disqualification.
- Judges' and referees' decisions will be final and binding.
- Event organizers reserve the right to modify rules or clarify in special cases.

RC CAR SPECIFICATIONS

- Participants must bring their own RC / E-RC cars (self-built vehicles only).
- Maximum dimensions: 30 cm × 30 cm (5% tolerance allowed).
- Maximum operating voltage: 16.8 V.
- IC engine cars and LEGO kits are not allowed.

GAME RULES

- Each team's best lap time across qualifying rounds will be considered for the finals.
- Penalties:
 - +5 seconds for each wheel touching outside the boundary line.
 - +5 seconds for each hand touch.
 - +10 seconds if the car goes out of the arena (must be placed back at the same spot).
 - +25 seconds for skipping an obstacle.
- Intentional damage to the track or cars will result in disqualification.

AUTOMOTIVE TECHNOLOGY

DRAG RACE XTREME

A high-speed RC drag racing challenge where teams race their custom-built vehicles over a straight track, competing for the fastest finish.

DESCRIPTION

RC Drag Race is a high-speed remote-controlled vehicle competition where participants compete to cover a 50-metre straight-line track in the shortest possible time.

The event gives participants freedom to design, build, modify and optimize their own RC vehicles while applying concepts of acceleration, traction, power transmission, gearing, vehicle dynamics and control.

The competition follows an Open Build approach, with only essential dimensional, weight, drivetrain, battery and safety restrictions. Participants can experiment with different motors, gearing, tyres, chassis configurations and other engineering solutions.

The event aims to promote hands-on engineering, innovation, practical problem-solving and competitive spirit among students from different institutions.

EVENT STRUCTURE

QUALIFICATION — TIME TRIAL

- All registered teams will participate individually.
- Each team will get 2 timed runs on the 50-metre straight track.
- The best valid time from the two runs will be considered as the team's qualifying time.
- All teams will be ranked according to their best qualifying time.
- The top 8 teams with the fastest qualifying times will advance to the head-to-head stage.

HEAD-TO-HEAD STAGE — QUARTER-FINALS

- The 8 qualified teams will be seeded according to their qualification ranking:
- Team 1 vs Team 8
- Team 2 vs Team 7
- Team 3 vs Team 6
- Team 4 vs Team 5
- Two teams will race simultaneously on the two parallel 50-metre tracks.
- The first vehicle to cross the finish line wins and advances.
- The qualifying times will not be considered for determining the winner of a head-to-head race.

AUTOMOTIVE TECHNOLOGY

SEMI-FINALS

- The four quarter-final winners will compete in two head-to-head races.
- Winner QF1 vs Winner QF2
- Winner QF3 vs Winner QF4
- The first vehicle to cross the finish line advances to the Grand Final.
- Third-Place Race
- The two semi-final losers will compete against each other.
- The winner will be awarded 3rd place.

GRAND FINAL

- The two semi-final winners will compete head-to-head.
- The first vehicle to cross the 50-metre finish line will be declared the RC Drag Race Champion.

CRASH / RESTART RULE:

- From the Head-to-Head Stage onwards, there will be no restart due to: Crash, Collision, Loss of control, Vehicle malfunction, Hitting an obstacle, Any other participant-related incident,
- The race will continue, and the team that successfully crosses the finish line first will win.
- Exception: A restart may be authorized by the event officials only if the race is affected by an external factor, track obstruction, timing-system failure, or other technical issue beyond the participants' control. The decision of the event officials will be final.

RULES AND REGULATIONS

- Each team shall consist of 2–4 participants.
- Each team shall register one RC vehicle for the competition.
- The competition will be conducted on a 50-metre straight drag track.
- There shall be no restriction on the drive configuration. 2WD, 4WD, AWD and other drive configurations are permitted.
- The maximum vehicle dimensions shall be:
 - Length: 300 mm (5% tolerance allowed)
 - Width: 300 mm (5% tolerance allowed)
 - Height: 200 mm
- The maximum permissible vehicle weight is 3 kg.
- The vehicle must be self-made/home-built by the participating team. Ready-to-run (RTR) or complete commercially manufactured RC vehicles are not permitted. Individual commercially available components may be used.

AUTOMOTIVE TECHNOLOGY

- Motor type, motor KV/RPM, ESC, gearing, drivetrain, chassis, suspension and tyre selection are unrestricted, subject to the specified safety requirements.
- The battery shall be limited to a maximum of 3S LiPo (11.1 V nominal / 12.6 V maximum fully charged).
- Battery voltage will be verified during technical inspection using a multimeter.
- The vehicle must pass the technical and safety inspection before participating.
- Batteries must be securely mounted, and all electrical connections must be properly insulated and secured.
- Vehicles must be operated only using a suitable remote-control system.
- The vehicle must remain within its designated racing lane during the run.
- A vehicle leaving the designated track/lane may be considered to have made an invalid run.
- During the qualification stage, if a vehicle crashes, loses control, malfunctions, or otherwise fails to complete a valid run, the attempt will be considered invalid. The team may proceed with its second scheduled attempt, but no additional attempt will be provided.
- From the Head-to-Head Stage onwards, no restart shall be provided for crashes, collisions, loss of control, vehicle malfunction, hitting an obstacle, or any other participant-related incident.
- A restart may only be authorized by event officials in case of an external factor, track obstruction, timing-system failure, or other technical issue beyond the participants' control.
- Deliberate interference, collision or obstruction of another participant's vehicle is strictly prohibited.
- Participants are prohibited from entering the racing track while a run is in progress.
- Repairs and adjustments may be carried out only in the designated area.
- Only the registered vehicle may be used throughout the competition.
- Any vehicle deemed unsafe by the technical officials may be disqualified until the safety issue is rectified.
- Any intentional violation of the technical regulations or safety guidelines may result in disqualification.
- The organizers reserve the right to modify the event schedule or format if required due to safety, technical or logistical reasons.
- The decision of the event officials/judges regarding technical compliance, run validity and final ranking shall be final and binding.

POC DETAILS

Student POC: Albin Laiju (9108156940)

Student POC: Swapnabit Das (7029449122)

PSYCHOLOGY

HOW I MET YOUR KILLER?

Everyone knows something. Nobody knows everything

DESCRIPTION

A murder has taken place, and only the sharpest minds can uncover the truth. In this three-round event, teams race against time through puzzles, clues, and live interrogations to build a criminal profile and present the most convincing theory.

EVENT STRUCTURE

ROUND 1: PRELIMINARY ROUND (DAY 1)

The preliminary round will consist of quizzes, including visual and auditory assessments related to crime, murder, and thriller. The questions will be given, and the teams must answer simultaneously on the provided paper. Each round will be timed, and the teams with the highest score will be promoted to the next round.

ROUND 2: CLUE COLLECTION ROUND

Certain clues and evidence related to the murder will be scattered around a designated area. The top teams with the most number of clues collected will move to the next round. Points will be awarded based on the number of clues collected and a creative description if provided with the clue mentioned. A description of the clue will provide extra points. Each round will be timed and the teams with the highest score will be promoted to the next round.

ROUND 3: MURDER MYSTERY ROUND (DAY 2)

- Round 3 is divided into 2 rounds, i.e., Interrogation Round and Theory Presentation. The final round is based on the premise of a killer on the loose. To find the killer, the teams will be provided with a set number of suspects along with the case details and timeline of the murder.
- They will have to interrogate these suspects (general information about suspects and victims will be provided beforehand) and make criminal profiles.
- At the end, each team will have to devise a theory describing who they think the actual killer is. The teams will be provided with the suspects' previous case histories and records.
- Once they are well-versed in how the victim/s died and the suspect/s involved, the task for the teams will be to interrogate each of the suspects and profile them based on their case histories.

PSYCHOLOGY

- The time given for interrogating each of the suspects will be two to three minutes, and each team is required to interrogate a total of five suspects (subject to change).
- Volunteers will be assigned to each room to keep track of time and observe if appropriate behavior towards suspects is followed, and to ensure that there are no malpractices.
- Once the interrogation is complete, the teams are required to discuss among themselves, profile the suspects, and come up with a theory that should indict the suspect who is most likely to be the serial killer.
- The theory should include the points and reasons the team believes are valid for framing a suspect as the killer.
- The theory needs to be presented to a panel of judges, who can cross-question the teams based on their theories, and the most convincing theories win the event.
- Creating a criminal profile: Your criminal profile should contain the following details -

Name of the offender

- Crime type (What was the crime? How was this crime committed? Did the killer try to cover his or her tracks and, if so, how?)
- Victimology (Common backgrounds and characteristics of victims)

Composure of the offender

- The Wants (What is it about this victim that attracted the killer?)
- Motivation (What motive or fantasy drove the killer to harm the victim in a particular manner?)
- Important: There is no predetermined killer chosen by the event hosts, and it solely depends on the team's creativity to come up with the most convincing theory based on a particular suspect (s), their profiling style, and how they deal with judges and their rebuttals.

PSYCHOLOGY

RULES AND REGULATIONS

- The event will consist of 3 Rounds: the Preliminary Round, Clue Collection Round and the Murder Mystery Round.
- The Preliminary Round will consist of a series of auditory and visual quizzes. The top teams will move to the Clue Collection Round.
- The Clue Collection Round will consist of a mini treasure hunt in a designated area, and the top teams will qualify for the Murder Mystery Round.
- The final round is based on the idea of a killer on the loose, and to find the killer, the teams will be given a set number of suspects to interrogate and profile. In the end, each team will have to develop a theory identifying who they believe is the actual killer.
- All teams will be given a total time of 15 minutes (subject to change) to interrogate all the suspects. The teams are free to use this time at their own discretion.
- All participants are free to discuss their ideas about the 'case' once they have finished their interrogations.
- No electronic devices are allowed during interrogations. Participants are allowed to take notes with pen and paper.
- No discussion is permitted, apart from the discussions with your own teammates.
- Total time for interrogation: 15 min (subject to change)
- Time for profiling and making the theory: 20 min (subject to change)
- Time for presenting to judges: 5 min + 2 min

POC DETAILS

Student POC: Maanya Bhatia (73048 53140)

Student POC: Rifat Khan (77550 99853)

Faculty POC: Dr. Ganesh Kumar J (95004 90815)

REGISTRATION FEE : 400 INR PER TEAM

TEAM SIZE: 4

PSYCHOLOGY

SHIPWRECK

The Final Float

DESCRIPTION

A storm has struck, and only one lifeboat remains. On board are some of the most influential figures of all time, including freedom fighters and mythological heroes, iconic movie characters and cartoon characters, controversial voices, and internet influencers. Each believes they are the one the world needs. But only one can float.

In this event, participants step into the shoes of legendary figures and, in character, defend why they deserve to survive. Through monologues, heated crossfire, and satire-filled exchanges, characters face off in a battle of wit, logic, and charisma, with only the sharpest, most convincing personas making it to the lifeboat.

EVENT STRUCTURE

ROUND 1: WHY I MUST LIVE (DAY 1)

Participants deliver a solo opening monologue in character (2 mins), building a case for why they are essential to the world and must survive over anyone else, focusing on their skills, abilities, knowledge, and the character's legacy. All monologues begin with a common starting line to set the shared stakes.

Example: "The sea doesn't care who you are. But I intend to make it care about me."

ROUND 2: ONE WORD (DAY 1)

Each character distills their entire survival case into a single word to be drawn at random, then defends it in 1 minute flat. The round tests how sharply a participant understands their own character under time pressure.

Example: Bob the Builder → "Rebuild": "Everything after this storm needs rebuilding, and that's the one thing I'm built for."

ROUND 3: SINK THEM (DAY 1)

Participants directly confront one another, calling out specific characters (one or more) by name and dismantling their survival arguments in real time (3 mins). The goal is to publicly weaken others' credibility while reinforcing your own relevance.

Example: "SpongeBob, your positivity doesn't fix a broken engine."

PSYCHOLOGY

ROUND 4: BACKSTAB (CRISIS) (DAY 1)

A dire crisis strikes the ship; evidence suggests the crash was planned. The captain hands participants a crisis to manage, implicating specific characters (e.g., engine schematics or weapons found in someone's possession), forcing accusations and defenses. (2 mins)

Example: "A weapons cache was discovered below deck; someone's been preparing for a fight no one else knew was coming."

ROUND 5: PUT IT ON PAPER (DAY 2)

Each character will have to submit a written case and present it to the judge for survival, based on everything that unfolded during the debate (3 mins). All drafts are then reviewed, flaws are exposed, and the draft with the fewest mistakes, at the captain's discretion, wins the lifeboat.

RULES AND REGULATIONS

- Individual participation only; no teams allowed.
- Characters will be assigned two days before the event.
- Delivery must be in English (other languages/styles may be used sparingly for authenticity).
- Round 1 consists of an introduction to the characters, each of whom will state why they should be the one to survive.
- Round 2: Each character sums up their survival case in a single word, drawn at random, then defends it in 60 seconds flat, testing how sharply they understand their character under pressure
- Round 3 is when participants can cross-question one another and explain why others do not deserve to be on the lifeboat.
- In round 4, a crisis will be announced, and the crewmates will navigate the situation presented to them.
- Round 5 requires each member to write a draft and present it to the audience, who then argue why they deserve to stay on the lifeboat based on the situations they faced earlier in the event.
- The timings are as follows: Round 1 is 2 minutes per person; Round 2 is 1 minute per person; Round 3 is capped at 3 minutes per person; Round 4 is 2 minutes per person; and Round 5 is 3 minutes per person.

PSYCHOLOGY

- Exceeding the time limit by more than 30 seconds will result in negative marking.
- Use of offensive or derogatory language or any inappropriate content will result in immediate disqualification.
- Participants must maintain their character throughout the event, especially during the interactions and rebuttals.

POC DETAILS

Student POC: Pearl John (73030 69827)

Student POC: Milan Deepak (80754 56898)

PSYCHOLOGY

FRAMES UNBOXED

Unscripted, Unfiltered, Unleashed!

DESCRIPTION

'Frames Unboxed' is a filmmaking competition where participants have a chance to express their creativity and originality through the lens of their camera. Through this event, participants will be given a theme on the spot to encourage fast thinking, instinctive ingenuity, and innovation. It's a form of storytelling interpreted through different minds and perspectives, where participants are free to voice their ideas and imaginations. So grab your camera, rally your crew, and let your imagination run wild. Fame and fun await!

EVENT STRUCTURE

'Frames Unboxed' is a two-day event, with no separate rounds.

DAY 1:

The teams will receive an introductory briefing on the competition's rules and regulations, after which the event theme will be revealed. Thereafter, the teams can spread around campus to shoot their respective films. The teams can stay back on campus until 9:00 PM.

DAY 2

The teams must submit their films on the Google Drive Link provided to them. All submissions must be done by 9:30 AM. The judge will then score the films based on the given judging criteria.

Note: Since the submission is online, the participants are not required to be physically present on the second day.

RULES AND REGULATIONS

- Duration of the short film: 7 - 8 minutes.
- Number of participants per team: 6 participants.
- Only English dialogue or voice-overs are allowed.
- Participants must bring their own technical equipment, such as cameras, tripods, speakers, microphones, laptops, pendrives, etc.
- All filming must take place on campus.
- All storylines, scripts, and concepts must be original. Plagiarism or copying from existing films will lead to immediate disqualification.

PSYCHOLOGY

- The specific theme(s) for the short film will be revealed on the day of the event.
- Participants are allowed to use soundtracks.
- Soundtracks must be free of vulgar or derogatory language; violations will result in disqualification.
- No obscene, vulgar, or inappropriate scenes are permitted; violations will result in disqualification.
- To submit the film, a Google Drive link will be shared with the participants, through which they will upload their films by the given deadline.
- The link provided to you will be open from 9:00 PM 15th of September till 9:00 AM 16th of September.
- No submissions will be accepted after the deadline.
- The short film must comply with all the rules and regulations of CHRIST (Deemed to be University).

PSYCHOLOGY

SWITCH AND SCENE

Think fast. Act faster!

DESCRIPTION

'Switch and Scene' is a theatrical showdown where quick thinking meets unpredictable twists! In Switch and Scene, A pair of performers will dive into exciting improv scenes with only a few minutes to prepare. With sudden role reversals, rapid genre changes, and an extra twist of change in the emotions, each duo must adapt instantly to their given prompts.

EVENT STRUCTURE

Switch and Scene is a one-day event, with no separate rounds. The event begins with a briefing on the rules and regulations for participants, followed by slot picking. The participants will have 6+1 minutes to act out their scene. There will be two buzzers during their act: the first will signal role reversal, and the second will signal the genre change. The second buzzer will indicate a change in the emotions.

RULES AND REGULATIONS

- Duration of the performance: 6 + 1 minutes.
- Number of participants per team: 2 participants.
- Each team member will be assigned a character with a contrasting power dynamic to their partner
- Characters will be revealed on the spot.
- Teams will have 1-2 minutes to discuss and prepare their initial approach.
- No costumes are allowed, and only minimal props will be provided; performers must rely solely on their acting skills.
- When the first buzzer sounds, performers must immediately switch characters.
- Along with role reversal, the team must change the genre of their scene, which will be shown to them through placards.
- When the second buzzer sounds, performers must change their characters' emotions, which are also to be shown through placards.
- Teams must maintain a coherent narrative throughout their performance despite changes.

PSYCHOLOGY

- Use of offensive or derogatory language or any inappropriate content will result in immediate disqualification.
- The short film must comply with all the rules and regulations of CHRIST (Deemed to be University).

BATTLE CLAY

A creative clay modelling challenge where participants transform ideas into unique three-dimensional forms through imagination, skill, and craftsmanship.

DESCRIPTION

Battle Clay is a creative and engaging clay modelling competition that brings together imagination, creativity, and hands-on skills. Participants are challenged to transform their ideas into meaningful three-dimensional forms using clay as the primary medium.

EVENT STRUCTURE

The event encourages experimentation, innovative thinking, and artistic expression while developing patience, precision, and craftsmanship. With a limited time to create, participants must think creatively and work efficiently to bring their concepts to life. Battle Clay provides an exciting platform for students to explore form, texture, and structure while competing with others. It celebrates creativity, encourages collaboration, and turns simple ideas into tangible creations. In addition to the sculpting challenge, this edition introduces a live pitch segment, in which each team must present and persuasively market their finished creation to a panel of judges, combining artistic craftsmanship with the art of communication and persuasion.

RULES AND REGULATIONS

- The event is open to undergraduate architecture and design students.
- Each team must consist of 2-3 participants.
- The sculpture must be created during the event within the allotted time.
- The given theme/prompt must be followed by all teams.
- Participants must bring only the permitted tools and materials.
- Clay will be provided by the organizers. Additional materials, if allowed, must follow the approved material list.
- Teams must not use pre-made, pre-assembled, or ready made sculpture components.
- Participants are encouraged to experiment with form, volume, texture, balance and composition.
- Each team must maintain a clean and safe working area.
- The sculpture must be completed and submitted before the submission deadline.

SCHOOL OF ARCHITECTURE

- Each team must present their concept briefly to the jury.
- Each team will be allotted a strict 3-minute window to pitch and promote their sculpture
- to the judges; the time limit will be strictly enforced, and teams exceeding it may be
- stopped or penalised at the judges' discretion.
- Each team will be allotted a strict 3-minute window to pitch and promote their sculpture
- to the judges; the time limit will be strictly enforced, and teams exceeding it may be
- stopped or penalised at the judges' discretion.
- Any form of copying or direct replication of an existing artwork will lead to disqualification.
- The organisers ' and jury ' s decisions will be final and binding

REVIVAL OUTLOOK

A sustainable fashion design challenge where participants transform unconventional materials, spaces, and cultural influences into innovative wearable designs.

DESCRIPTION

Revival Outlook is the flagship fashion design competition of Magnovite, challenging participants to reinterpret spaces, materials, and cultural narratives into bold, wearable expressions of design. It encourages sustainable thinking and experimentation with unconventional resources, blurring the boundaries between design and fashion.

RULES AND REGULATIONS

- **Theme Adherence:** For this competition, participants are challenged to interpret the theme "CODE COUTURE" and present a fashion look or collection that reflects their own vision of how technology and AI are influencing the future of fashion.
- **Time Limit:** Each team is strictly allotted 6 minutes total (5+1, including setup, performance, and clearance). Exceeding the time limit will result in a 5 mark penalty per extra minute. Open to all students. Team size: 8 -15 members.
- **Originality:** Costumes and garments must be original creations. Pre-designed or commercially rented readymade outfits are strictly prohibited.
- **Props Policy:** Props are allowed but must be lightweight and easy to carry on and off stage. Use of open flames, water, powders, glass, or any messy/hazardous substances that alter the stage surface is strictly forbidden.
- **Audio-Visual Tracks:** High-quality music tracks must be submitted in advance on a USB drive, 1 day before the event. Tracks containing vulgarity or offensive language will lead to immediate disqualification.
- **Code of Conduct:** Vulgarity, obscenity, or inappropriate attire on stage will lead to immediate disqualification. Participants must adhere to a decent and appropriate dress code throughout the event.
- **Decision:** The decision of the judging panel is final and binding on all participating teams.
- **Dress Code:** Sleeveless garments or outfits above knee length are not permitted unless skin tights are worn underneath (applicable to all genders). Costumes should not be revealing in any form.

SCHOOL OF ARCHITECTURE

UTOPIAN LAND

A digital world-building challenge where participants create imaginative visions of a fictional city through concept art, spatial storytelling, and visual design.

DESCRIPTION

Utopian land is an open digital art and concept design competition challenging artists to visually construct a non-existent city. Participants are invited to explore alternate realities, speculative futures, extreme environmental conditions, technological shifts, or fictional societies, translating complex urban imagination into compelling digital artwork. The core focus is on spatial storytelling, atmospheric visual design, and world-building through digital media.

RULES AND REGULATIONS

- **Eligibility:** The event is open to registered participants who meet the eligibility criteria specified by the organizing committee.
- **Registration:** Participants must complete the registration process within the stipulated deadline. No changes to registration details will be permitted after the deadline unless approved by the organizers.
- **Punctuality:** Participants must report to the venue at the designated time. Late arrivals may be disqualified.
- **Use of AI:** AI is limited to research and conceptual references, meaning all final visual assets must be created without generative AI Tools under penalty of disqualification, while standard non-generative editing tools remain fully permitted.
- **Fair Play:** Participants must maintain professional conduct and demonstrate integrity, discipline, and respect towards fellow participants, judges, volunteers, and organizers.
- **Electronic Devices:** The use of electronic devices is permitted throughout the event.
- **Decision of Judges:** The decisions of the judging panel and organizing committee will be final and binding. No appeals or arguments against the evaluation process will be entertained.
- **Disqualification:** Any form of cheating, plagiarism, misconduct, impersonation, unauthorized assistance, or violation of event rules may lead to immediate disqualification. Any entry found to contain prompt-generated assets, AI-manipulated art, or fraudulent proof of work will be immediately disqualified.

ETHEREA : DRAWING THE UNSEEN

A timed sketching challenge where participants bring a given theme to life through original, expressive artwork.

DESCRIPTION

A creative sketching event that encourages participants to transform their imagination, observations and ideas into expressive sketches. The event provides a platform to explore creativity, develop artistic skills and showcase individual sketching styles within the given time and theme.

RULES AND REGULATIONS

- The sketch must be original and created during the event.
- Participants must bring their own sketching materials and stationary.
- Tracing, printed references and pre drawn artwork are not allowed.
- The theme will be announced at the beginning of the event.
- Participants must complete their artwork within the given time limit.
- Only the materials permitted by the organisers may be used.
- Any form of plagiarism or copying will lead to disqualification.
- The jury's decision will be final.
- Participants are responsible for their own materials and belongings.

SCIENCE AND HUMANITIES

THE BARD'S GAMBIT: RHETORIC AND LITERARY DEBATE

A debate fueled by facts, won with wits

DESCRIPTION

The Bard's Gambit: Rhetoric & Literary Debate is a dynamic speaking competition that celebrates the power of language, critical thinking, and persuasive communication. Inspired by classical rhetoric and literature, the event challenges participants through debates, literary character face-offs, impromptu speeches, and counterfactual historical arguments. Teams must think on their feet, defend unconventional viewpoints, and use logic, humour, evidence, and eloquence to persuade both judges and the audience. The competition blends literature, history, philosophy, and public speaking into an entertaining intellectual battle that rewards creativity as much as factual accuracy. Designed for students from all disciplines, The Bard's Gambit enhances confidence, communication, teamwork, and analytical reasoning while demonstrating that the greatest battles are often won with ideas rather than force.

EVENT STRUCTURE

ROUND 1 – RHETORIC BLITZ (15 MINUTES)

Teams receive an impromptu topic and have 2 minutes to prepare, followed by 3 minutes to present. Topics may include science, literature, ethics, technology, or contemporary issues.

ROUND 2 – LITERARY FACE-OFF (20 MINUTES)

Teams are assigned famous literary or historical characters (e.g., Shakespeare, Sherlock Holmes, Cleopatra, Chanakya, Marie Curie). Participants defend or humorously "roast" opposing characters using evidence, wit, and rhetorical techniques.

ROUND 3 – COUNTER-HISTORY DEBATE (20 MINUTES)

Teams debate alternate-history scenarios such as:

What if electricity had never been discovered?

What if AI existed during the Renaissance?

What if Newton and Einstein debated today?

Judges evaluate creativity, logic, and persuasive ability

SCIENCE AND HUMANITIES

GRAND FINALE – THE BARD'S GAMBIT (10 MINUTES)

Finalists receive a surprise topic and engage in a rapid-fire debate where rebuttals, audience interaction, and persuasive speaking determine the champion.

RULES AND REGULATIONS

- Teams must consist of 2 participants.
- Participants must report 20 minutes before the event.
- Preparation time is limited and must be strictly followed.
- Use of mobile phones, AI tools, or internet access is prohibited during the competition.
- Respectful language and professional conduct are mandatory.
- Personal attacks, offensive remarks, or discriminatory comments will lead to penalties.
- Participants must stay within the allotted speaking time.
- Judges may interrupt if time limits are exceeded.
- Judges' decisions are final and binding.
- Teams must adhere to all event instructions and maintain decorum.

CANVAS OF MINDS: STEM FACE ART CHALLENGE

When faces become canvases, each has a story to tell

DESCRIPTION

Canvas of Minds: STEM Face Art Challenge is a vibrant live art competition where creativity meets academics. Teams of two transform a teammate's face into a living masterpiece inspired by an on-the-spot theme drawn from Mathematics, Physics, Chemistry, or English Literature and Language. Participants must creatively interpret abstract concepts, famous discoveries, literary works, equations, symbols, or scientific phenomena using only face painting techniques. With imagination, artistic skill, and storytelling at its core, the event challenges students to communicate complex ideas visually. The competition encourages interdisciplinary thinking by blending art with education while promoting originality, teamwork, and self-expression. Whether depicting the elegance of mathematical patterns, the beauty of chemical reactions, the mysteries of physics, or the richness of literature, every face becomes a unique work of art.

EVENT STRUCTURE

PHASE 1 – THEME REVEAL (10 MINUTES)

Each team receives one randomly assigned theme from:

Mathematics

Examples: Infinity, Fractals, Geometry, Fibonacci, Mathematical Genius

Physics

Examples: Space-Time, Quantum World, Black Hole, Light, Newton's Universe

Chemistry

Examples: Periodic Table, Fire & Ice, Chemical Bonds, Radioactivity, Molecular Art

English

Examples: Shakespeare, Alice in Wonderland, Poetry, Fantasy, Gothic Literature

PHASE 2 – FACE PAINTING (60 MINUTES)

Teams create a complete face artwork based on the assigned theme.

Participants may extend the artwork slightly onto the neck or hands if desired.

PHASE 3 – PRESENTATION (2 MINUTES PER TEAM)

Teams explain: Theme interpretation, Artistic concept, Symbolism, Creative process

SCIENCE AND HUMANITIES

RULES AND REGULATIONS

- Teams must consist of 2 participants.
- One participant must serve as the artist and the other as the model.
- Participants must bring their own face paints, brushes, sponges, palettes, mirrors, and accessories.
- Only cosmetic-grade, skin-safe, non-toxic face paints are permitted.
- Acrylic paints, poster colours, fabric paints, oil paints, permanent markers, spray paints, or any harmful substances are strictly prohibited.
- The assigned theme must be followed.
- Artwork must be created entirely during the competition.
- No pre-painted designs or stencils are allowed.
- Teams must complete their artwork within the allotted time.
- AI and internet reference use will be restricted for the duration.
- Judges' decisions are final.

SQUID GAME: SQUAD SURVIVAL

Adapting the Netflix original into a high-stakes campus competition

DESCRIPTION

Squid Game: Squad Survival is an adrenaline-filled team challenge inspired by popular survival games, reimagined as a safe, exciting, and strategy-driven competition. Teams face a series of physical and mental challenges, including Red Light, Green Light, Dalgona Extraction, Memory Bridge, Strategic Tug-of-War, and surprise elimination rounds, that test coordination, communication, decision-making, and resilience under pressure. Every completed challenge earns survival points, while mistakes can lead to penalties or elimination. The event emphasizes teamwork, leadership, and tactical thinking rather than individual strength alone. Combining fast-paced action with suspense and entertainment, Squad Survival delivers a thrilling experience where only the most coordinated and resourceful team earns the title of Ultimate Survivors.

EVENT STRUCTURE

ROUND 1 – RED LIGHT, GREEN LIGHT (15 MINUTES)

- Teams compete one member at a time.
- Participants must reach the finish line without moving during "Red Light."
- Motion sensors or event marshals detect movement.
- Time penalties apply for violations.

ROUND 2 – DALGONA CHALLENGE (15 MINUTES)

- Teams carefully extract a predefined shape from a candy or substitute material.
- Breaking the shape results in elimination or penalty points.
- The fastest successful teams advance.

ROUND 3 – MEMORY BRIDGE (20 MINUTES)

- Teams cross a path of numbered or colored tiles after observing a sequence.
- Correct memory, communication, and coordination are essential.
- Wrong choices incur penalties or require restarting.

SCIENCE AND HUMANITIES

ROUND 4 – STRATEGIC TUG-OF-WAR (15 MINUTES)

- Teams compete in knockout matches.
- Victory depends on teamwork, balance, timing, and coordinated effort rather than brute strength alone.
- Grand Finale if required – Squad Survival (15 Minutes)
- Finalists face a mixed challenge combining puzzles, speed, and teamwork.
- The highest-scoring or last remaining team wins the championship.

RULES AND REGULATIONS

- Teams must consist of 6 participants.
- All participants must wear appropriate sports shoes.
- Unsportsmanlike conduct or rough play is strictly prohibited.
- Follow instructions from referees and event coordinators at all times.
- Physical contact outside designated game rules is not allowed.
- Judges may stop any activity for safety reasons.
- Any attempt to cheat will result in immediate disqualification.
- Teams must report 30 minutes before the event.
- The organizers reserve the right to modify challenges if required for safety.
- Judges' decisions are final.

SCIENCE AND HUMANITIES

CHESS GRANDMASTER

DESCRIPTION

Chess Grandmaster is a competitive chess tournament designed to celebrate strategic thinking, discipline, and composure under pressure. The event brings together players of varying skill levels to compete in a structured, FIDE-regulated environment that mirrors the rigor of professional chess. Centered on the theme of mastery — earning the title of "Grandmaster" through skill, patience, and calculated risk — the tournament turns a quiet, cerebral game into an engaging, spectator-friendly competition. Beyond entertainment, it offers genuine learning value: participants sharpen decision-making, foresight, and mental resilience, while spectators gain exposure to the elegance of tournament-level play. The event is expected to strengthen campus chess culture, encourage regular practice, and surface standout talent for future competitive circuits — delivering a well-organized experience for players and audience alike.

RULES AND REGULATIONS

- Players alternate turns, White moving first; each piece moves per the FIDE Laws of Chess.
- Check, checkmate, and stalemate are adjudicated as per standard FIDE definitions.
- Special moves — castling, en passant, and pawn promotion — are permitted as per FIDE rules.
- Touch-move rule applies; a piece deliberately touched must be moved or captured if legally possible.
- An illegal move must be retracted and a legal move played; the arbiter may add time to the opponent's clock.
- Draws are permitted by mutual agreement, stalemate, threefold repetition, the fifty-move rule, or insufficient material.
- Games are played on a chess clock; exceeding the allotted time results in loss, unless the opponent cannot possibly checkmate.

SCIENCE AND HUMANITIES

- Use of notes, outside advice, analysis, or electronic devices during play is strictly prohibited.
- Unsporting conduct or repeated rule violations may result in warnings, time forfeits, or disqualification at the arbiter's discretion.
- The Arbiter's decision is final on all matters of play and conduct during the event.

BEST MANAGEMENT TEAM

A people-powered adventure featuring escape rooms, trust challenges, impact missions, and crisis simulations, where every decision shapes your team, your community, and your success

DESCRIPTION

The Corporate Crucible is a two-day, high-intensity Best Management Team (BMT) competition designed to test how effectively teams think, decide, communicate and lead under pressure. Participants step into the shoes of business leaders navigating a dynamic corporate environment where strategy meets uncertainty, decisions carry consequences, and teamwork determines success. The competition brings together students from diverse academic backgrounds to demonstrate their ability to analyse complex situations, solve business problems, manage competing priorities and present compelling strategic solutions. More than a test of business knowledge, The Corporate Crucible is a test of leadership instinct — challenging teams to remain agile, collaborative and decisive when the stakes are high. Participants will leave the Crucible with more than a winning title — they will experience what it takes to think like leaders, act like strategists and perform as one team.

EVENT STRUCTURE

- The competition unfolds across two action-packed days, taking participants through an immersive corporate experience.
- Teams will encounter a series of strategic, analytical, creative and leadership-driven challenges designed to evaluate different dimensions of managerial capability.
- Throughout the competition, participants will be required to collaborate effectively, respond to evolving situations, make informed decisions and communicate their ideas with clarity and conviction.
- The event culminates in a high-stakes leadership challenge, where the strongest teams will compete for the title of Best Management Team

MASTER OF BUSINESS ADMINISTRATION

RULES AND REGULATIONS

- Each team must consist of exactly three participants.
- All three members of a team must be from the same participating institution.
- The event is open to both undergraduate and postgraduate students across all academic disciplines.
- Teams must be available for the entire duration of the two-day competition.
- The competition is designed to be non-technical; all necessary information and materials required for the challenges will be provided by the organisers.
- Participants are expected to demonstrate teamwork, leadership, strategic thinking, problem-solving and effective communication.
- All team members must actively contribute throughout the competition.
- Mobile phones, smart devices or unauthorised external material may not be used unless explicitly permitted by the organisers.
- Any form of plagiarism, unauthorised assistance, disruptive conduct or misconduct may result in disqualification.
- All submissions must be completed within the time limit specified by the organisers. Late submissions will not be accepted.
- Any additional instructions applicable to a particular challenge will be communicated by the organisers before its commencement.
- The decision of the judging panel and organising committee regarding scoring, rankings and eliminations shall be final and binding.
- Participants must adhere to all Magnovite and Christ University regulations throughout the event.

QIZZ-WHIZZ: BUSINESS UNPLUGGED

"A two-day battle of business knowledge, strategic thinking, quick decisions, and calculated risk-taking."

DESCRIPTION

Qizz-Whizz: Business Unplugged is a two-day, team-based business quiz designed to move beyond traditional question-and-answer formats. Instead of testing only memory, the event challenges participants to observe business clues, connect ideas, interpret commercial situations, identify brands and business models, make strategic decisions and take calculated risks.

The quiz begins with broad preliminary rounds for all participating teams and progressively moves towards high-pressure championship rounds. Day 1 tests business awareness, observation, connections, commercial reasoning and strategic thinking. The top eight teams qualify for Day 2, where the format becomes more competitive through progressive clues, an interactive business board, an auction-style strategy round, a live boardroom battle and a final wagering challenge.

The format is deliberately non-technical and suitable for both UG and PG participants. Questions may draw from brands, companies, entrepreneurship, marketing, strategy, consumer behaviour, business history, Indian business, markets and contemporary business developments without requiring specialist calculations or advanced technical knowledge.

RULES AND REGULATIONS

- Each team must consist of exactly two participants.
- Participants must belong to the same participating institution, subject to Magnovite regulations.
- The event is open to both undergraduate and postgraduate students.
- The quiz is non-technical; no advanced technical, programming or specialist analytical knowledge is required.
- Teams must use the team code allotted at registration on all answer sheets.
- All electronic devices, including mobile phones and smart watches, must remain away from the team during written rounds unless the organisers explicitly permit their use.

MASTER OF BUSINESS ADMINISTRATION

- The team qualifying for Day 2 is the same team that participated on Day 1; members cannot be substituted after the qualification announcement except where fest rules explicitly permit it.
- Negative marking applies only in rounds where it is specifically announced.
- Once an answer is submitted in a progressive clue round, it cannot be changed.
- Virtual Deal Tokens used in The Deal Room have no real monetary value and cannot be transferred between teams.
- Deal Tokens are separate from the accumulated quiz score.
- Participants must follow the time limits, submission instructions and stage-management directions announced by the organisers.
- Plagiarism, unauthorised assistance, use of electronic devices without permission, disruptive behaviour or any form of misconduct may lead to disqualification.
- In case of a tie for qualification or elimination, the organisers will conduct a sudden-death written or buzzer tie-break.
- The decision of the Chief Quizmaster and organising committee will be final.

STARTUP SHOWDOWN

"A dynamic entrepreneurial experience where participants transform opportunities into ventures, build their leadership teams, navigate business challenges, and compete to win investor confidence."

DESCRIPTION

Startup Showdown is an immersive, team-based entrepreneurship challenge that takes participants through the journey of building and scaling a startup. Teams will begin with an unexpected business opportunity and transform it into a viable venture through creativity, strategy, and smart decision-making.

As the competition unfolds, participants will shape their brand, make critical business decisions, build their leadership team, analyse business situations, and respond to challenges that test their adaptability. The journey culminates in an investor-facing pitch where teams must defend their vision and demonstrate why their venture deserves to succeed.

Designed to test entrepreneurial thinking, strategic decision-making, leadership, teamwork, business acumen, creativity, and adaptability, Startup Showdown challenges participants to think beyond the idea and experience what it takes to build a business.

EVENT STRUCTURE

The competition begins with The Spark, where teams are challenged to identify potential in an unexpected opportunity and turn it into the foundation of a venture. In The Build, they take that initial spark further by shaping their venture, defining its identity, and making strategic choices that could determine its future. The People puts their ability to build the right team to the test, while The Numbers challenges them to step into the shoes of decision-makers, interpret business information, and determine the direction of their venture. The journey continues into The Overnight Challenge, where shortlisted teams will take their venture to the next level through a challenge that extends beyond the day's competition. Finally, The Boardroom brings everything together as teams face the unexpected, defend their decisions, and put their venture to the ultimate test before a panel of investors.

MASTER OF BUSINESS ADMINISTRATION

RULES AND REGULATIONS

- Each team must consist of 2-3 members.
- Participants must belong to the same participating institution, subject to fest regulations.
- The startup developed in Round 1 will continue throughout the subsequent rounds.
- Participants must adhere to the time limits specified for each round.
- The virtual currency used in the Executive Auction has no real monetary value.
- Teams cannot transfer virtual funds between teams during the auction.
- The Excel round will be conducted using the tools and resources specified by the organisers.
- Overnight-round submissions must follow the prescribed format and deadline.
- Teams must be prepared to present and defend their decisions before the judges.
- Plagiarism, unauthorised assistance or misconduct may result in disqualification.
- The organisers reserve the right to modify the round structure where operationally necessary.
- The decision of the judges and organising committee will be final.

BEST MANAGER

Know the Game, Master the Challenge, Lead the Way

DESCRIPTION

Best Manager is a flagship management event designed to test participants on their ability to think, strategise, communicate, lead, and make effective decisions under pressure. The event simulates real-world managerial situations, challenging participants to step into the shoes of a manager and navigate diverse business scenarios.

The competition encompasses multiple facets of management, including Human Resources, Marketing, Finance, Operations, Strategy, Leadership, Communication, and Decision-Making. Through a series of engaging rounds, participants will be tested on their analytical thinking, creativity, problem-solving abilities, managerial aptitude, and ability to adapt to dynamic situations.

Rather than evaluating participants on a single skill set, Best Manager takes a 360° approach to management, assessing how effectively an individual can balance people, resources, strategy, and business objectives. The event ultimately seeks to identify the participant who demonstrates the versatility, confidence, leadership, and managerial acumen required to become the complete manager.

RULES AND REGULATIONS

- **Eligibility:** The event is open to registered participants who meet the eligibility criteria specified by the organizing committee.
- **Individual Participation:** Each participant must compete individually and demonstrate their own managerial capabilities throughout the event.
- **Registration:** Participants must complete the registration process within the stipulated deadline. No changes to registration details will be permitted after the deadline unless approved by the organizers.
- **Punctuality:** Participants must report to the venue at the designated time. Late arrivals may be disqualified from a particular round at the discretion of the organizers.
- **Fair Play:** Participants must maintain professional conduct and demonstrate integrity, discipline, and respect towards fellow participants, judges, volunteers, and organizers.

BACHELOR OF BUSINESS ADMINISTRATION

- Use of AI: AI tools may be used for research and information gathering. However, participants are responsible for verifying the accuracy of the information and ensuring that their final submissions demonstrate their own analysis, interpretation, and managerial judgement.
- Electronic Devices: The use of electronic devices will be permitted only when specifically allowed by the organizers for a particular round.
- Decision of Judges: The decisions of the judging panel and organizing committee will be final and binding. No appeals or arguments against the evaluation process will be entertained.
- Disqualification: Any form of cheating, plagiarism, misconduct, impersonation, unauthorized assistance, or violation of event rules may lead to immediate disqualification.

CORPORATE CROSSFIRE

Where Diplomacy Meets the Knife, and Every Decision Has a Price

DESCRIPTION

Corporate Crossfire simulates real-world corporate situations where participants must navigate conflicting perspectives, stakeholder interests, ethical dilemmas, and unexpected challenges. The event moves beyond conventional debates by placing participants in dynamic situations that demand strategic thinking, informed decision-making, adaptability, and the ability to respond effectively under pressure.

RULES AND REGULATIONS

- **Team Composition:** Each team must consist of two participants, and the team composition cannot be changed once the event begins.
- **Timeliness:** Participants must report on time for every round. Late entry or delayed submission may result in a deduction of marks or disqualification from the respective round.
- **Submission:** All submissions must be made through the designated platform within the specified time. Late submissions will not be accepted unless permitted by the organizers.
- **AI Usage:** AI tools may be used only in rounds where they are explicitly permitted. The usage will be time-bound and limited as specified for that particular round.
- **Unauthorized or excessive use of AI** may result in disqualification from the round.
- **Originality:** All submissions and responses must be the participants' own work.
- **Plagiarism, copying, or using another team's ideas or submissions without permission** will result in disqualification.
- **GD Conduct:** Participants must maintain a professional and respectful tone during group discussions. Active listening, relevant participation, and constructive engagement are expected. Excessive interruption or dominating the discussion may affect the
- evaluation.
- **Debate Conduct:** Participants must challenge the argument, not the individual. Personal remarks, offensive language, shouting, or deliberately preventing another participant from speaking will not be permitted.
- **Use of Devices:** Mobile phones and other electronic devices may be used only when

BACHELOR OF BUSINESS ADMINISTRATION

- permitted for a particular round. Unauthorized communication or use of devices during restricted rounds may result in disqualification.
- Time Management: Participants must strictly adhere to the time limits communicated for each round. Judges may stop a participant or team once the allotted time expires.
- Judging & Organizer's Decision: Participants will be evaluated according to the
- criteria specified for each round. The decision of the judges and organizing committee regarding scoring, elimination, and disqualification will be final and binding.

STRATEGIC FINANCE

A battle of financial minds where strategy is the weapon, risk is the game, and every decision shapes the outcome

DESCRIPTION

The event is structured around two connected halves that mirror the Strategic Finance vertical. One-half centers on competition, decision-making, and problem-solving, representing Corporate Strategy. The other centers on growth, value creation, and money management, representing Wealth Management.

This structure gives the event a clear identity and ensures both domains receive equal focus throughout the competition. It also makes it easy to organize individual rounds under one of the two halves, so every task ties back into a single, consistent story for the event.

EVENT STRUCTURE

The event follows a business case-based format, structured around a series of real-world inspired tasks designed to test participants across the complete spectrum of finance. The format integrates on-the-spot tasks, case-solving challenges, and financial quizzes, ensuring comprehensive coverage of both corporate strategy and wealth management domains. Each round is designed to simulate authentic decision-making pressures faced in the industry, pushing participants to think critically, act swiftly, and adapt under uncertainty. The competition is structured over two days. The event follows a constant elimination format, with rounds narrowing the participant pool and raising the stakes as teams advance. The final stage of the competition features a live stage round, where the remaining teams present and defend their solutions to a crisis scenario in front of a live audience, showcasing not only their strategic acumen but also their composure, communication, and problem-solving skills under real-time pressure.

RULES AND REGULATIONS

- **Team Composition:** Each team must consist of two participants, and the team composition cannot be changed once the event begins.
- **Timeliness:** Participants must report on time for every round. Late entry or delayed submission may result in a deduction of marks or disqualification from the respective round.
- **Submission:** All submissions must be made through the designated platform (Google Classroom) within the specified time. Late submissions will not be accepted unless permitted by the organizers.

BACHELOR OF BUSINESS ADMINISTRATION

- **AI Usage:** AI tools may be used only in rounds where they are explicitly permitted. Use will be time-bound and limited as specified for that round. Unauthorized or excessive use of AI may result in disqualification from the round.
- **Originality:** All submissions and responses must be the participants' own work. Plagiarism, copying, or using another team's ideas or submissions without permission will result in disqualification.
- **Use of Devices:** Mobile phones and other electronic devices may be used only when permitted for a particular round. Unauthorized communication or use of devices during restricted rounds may result in disqualification.
- **Judging & Organizer's Decision:** Participants will be evaluated according to the criteria specified for each round. The decision of the judges and organizing committee regarding scoring, elimination, and disqualification will be final and binding.

MARKETING X PR

A high-stakes challenge where strategy and creativity collide to turn bold ideas into powerful brand stories

DESCRIPTION

Marketing X PR is a dynamic Marketing and PR event that challenges participants to think creatively, build compelling campaigns, respond to evolving situations, and communicate effectively with diverse audiences. The event focuses on strategic reasoning, innovation, adaptability, and the ability to shape public perception through impactful marketing and public relations solutions.

RULES AND REGULATIONS

- **Eligibility:** The event is open to registered participants who meet the eligibility criteria specified by the organizing committee.
- **Team Participation:** Each team must consist of two participants, and the team composition cannot be changed once the event begins.
- **Punctuality:** Participants must report to the venue at the designated time. Late arrivals may lead to deduction of marks or disqualification at the discretion of the organizers.
- **Submission:** All submissions and tasks must be completed within the stipulated time. Late submissions will not be accepted unless approved by the organizers.
- **Use of AI:** AI tools may be used only in rounds where they are explicitly permitted. Any permitted usage will be time-bound and subject to the limits specified for that particular round.
- **Originality:** All submissions, campaigns, and responses must be the participants' own work. Plagiarism, copying, or unauthorized assistance may result in immediate disqualification.
- **Use of Electronic Devices:** Mobile phones, laptops, and other electronic devices may be used only when permitted for a particular round.

BACHELOR OF BUSINESS ADMINISTRATION

- Time Management: Participants must strictly adhere to the time limits specified for each round. Judges may stop a presentation or activity once the allotted time expires.
- Decision of Judges: The decisions of the judging panel and organizing committee will be final and binding. No appeals regarding the evaluation process will be entertained.
- Disqualification: Any form of cheating, plagiarism, misconduct, impersonation, violation of event rules, or unethical behavior may lead to immediate disqualification.

IIIC

CASECRAFT: PITCH & PIVOT

An immersive industry case challenge where teams analyse, strategise, adapt to the unexpected, and convince stakeholders that their solution can survive.

DESCRIPTION

This event is designed to enable student teams to apply strategic and technical reasoning to a live, real-world industry case, thereby bridging academic theory with the pace and complexity of actual critical problem-solving.

Participating teams are presented with an unseen industry case on the day of the event and are required to analyse it and formulate a viable solution, submitted as a strategic pitch deck of up to three slides. Every team then draws a random twist, an unforeseen disruption to their case, and must revise their solution's future prospects accordingly, presenting and defending it as a hand-made poster, created using art supplies provided by the organising committee, before a panel acting as skeptical investors. Results are announced at a valedictory ceremony the following day.

EVENT STRUCTURE

- **Briefing Session:** A mandatory briefing is conducted prior to the competition to outline the case structure, round format, twist mechanic, and submission specifications, and to address participant queries.
- **Case Release:** Teams receive the live industry case on the day of the event.
- **Round 1: Live Case Analysis & Pitch Deck Submission:** Teams collaboratively analyse the case and formulate a strategic, technically feasible solution within the stipulated time, and submit a pitch deck of up to 3 slides (excluding the title slide and annexures) detailing their proposed solution.
- **The Twist:** Every team draws a chit at random, introducing an unforeseen disruption to their case (such as a funding cut, new competitor, or regulatory change) that they must factor into their solution's future outlook.
- **Round 2: The Skeptical Investor: Poster Presentation:** All teams revise their solution's future prospects in light of the drawn twist and hand-make a poster to defend its continued viability.
- **Final Presentation:** All teams present and defend their poster before a panel of industry experts and academic representatives, acting as skeptical investors, followed by a live Q&A.

IIIC

- Judging and Evaluation: The panel evaluates each team's performance across both the pitch deck and poster presentation, and finalises rankings.
- Valedictory Ceremony (Day 2): Results are announced and winners are felicitated at the valedictory ceremony on the following day.

RULES AND REGULATIONS

- Each team shall comprise 2 to 4 participants currently enrolled in any recognised undergraduate or postgraduate programme.
- Interdisciplinary teams are encouraged, as diverse academic perspectives often lead to more comprehensive and practically viable outcomes.
- A mandatory briefing session will be conducted prior to the competition to outline the case structure, round format, twist mechanic, and submission specifications, and to address participant queries.
- All teams will proceed through both rounds of the competition; there is no elimination between Round 1 and Round 2.
- Round 1 pitch decks must not exceed 3 slides, excluding the title slide and annexures (if any), and must represent the team's original solution to the case.
- Each team must draw their twist chit at the designated time and incorporate the disruption drawn into their Round 2 poster and defense; twists, once drawn, cannot be exchanged, re-drawn, or declined.
- Posters must be hand-made by the team using their own art supplies on chart papers provided by the organising committee. Posters must be completed by the team within the stipulated time during Round 2.
- All submissions (pitch deck and poster) must represent original work developed during the event. Any form of plagiarism will result in immediate disqualification.
- Participants are expected to maintain professional conduct and adhere to event timelines throughout the competition.
- Judges' decisions are final and binding in all matters related to rankings and awards.
- Results will be announced, and winners felicitated at the valedictory ceremony on Day 2.
- The organising committee reserves the right to modify the event structure, schedule, or rules if deemed necessary for the effective conduct of the competition.

OFFICE OF INTERNATIONAL AFFAIRS

AI FILM FEST

Where AI Meets Global Creativity

DESCRIPTION

AI Film Fest is a creative and engaging filmmaking competition organized by the Office of International Affairs (OIA), CHRIST (Deemed to be University), Kengeri Campus, as part of MAGNOVITE 2026. The event brings together students from universities and colleges across the world to explore the possibilities of Artificial Intelligence in filmmaking, storytelling, visual communication, and creative expression. The competition is open to Grade 11, Grade 12, and undergraduate (UG) students from institutions outside India. Participants will have an opportunity to showcase their creativity, storytelling abilities, technological skills, and cultural perspectives through AI-powered filmmaking. Participants may compete individually or in teams of up to three members, with all members of a team belonging to the same university or college. Participants will create a short film based on a theme or creative challenge announced by the organizers. Artificial Intelligence may be creatively incorporated into various stages of production, including scriptwriting, image and video generation, voiceovers, music, animation, editing, visual effects, and other permitted aspects of filmmaking. The event aims to encourage global creativity, cultural expression, innovation, responsible use of emerging technologies, and cross-cultural exchange, while providing students from diverse international backgrounds with a platform to connect and share their unique perspectives through visual storytelling.

EVENT STRUCTURE

- **Registration & Team Formation:** Participants register individually or form teams of up to three members. Registered participants will receive the official event guidelines and other necessary information.
- **Theme / Challenge Reveal:** The official film theme or creative challenge will be announced by the organizers. Participants will then develop their story and film concept based on the announced theme.
- **Story & Script Development:** Participants develop their storyline, characters, dialogue, screenplay, and overall creative concept. AI tools may be used to support scriptwriting, brainstorming, research, and other creative development activities.
- **AI Film Production:** Participants create their films using AI and other permitted creative tools. AI may be used for generating visuals, videos, voiceovers, music, animation, visual effects, and other aspects of film production.

OFFICE OF INTERNATIONAL AFFAIRS

RULES AND REGULATIONS

- **Team Size:** Participants may compete individually or in teams of 1-3 members.
- **Film Duration:** The final film must have a maximum duration of 5 minutes, including credits.
- **Originality:** All films must be original and created specifically for the event. Plagiarism, copying, or substantial reuse of another team's work will result in disqualification.
- **AI Usage:** Artificial Intelligence must play a meaningful and significant role in the creation of the film. Participants may use AI for scripts, visuals, video, voiceovers, music, animation, editing, visual effects, and other permitted creative processes.
- **Theme:** The submitted film must be based on and appropriately respond to the theme / challenge announced by the organizers.
- **Copyright & Intellectual Property:** Participants must use only original, licensed, royalty-free, AI-generated, or otherwise legally permitted content. Unauthorized use of copyrighted material is strictly prohibited.
- **Content Standards:** Films must be suitable for a college audience. Offensive, discriminatory, hateful, sexually explicit, defamatory, or otherwise inappropriate content is prohibited.
- **Submission:** Films must be submitted in the format specified by the organizers and before the announced deadline. Late submissions may attract penalties or may be rejected at the discretion of the organizers.
- **AI Disclosure:** Each team must submit a brief AI Usage Statement / AI Usage Report clearly identifying the AI tools used and explaining their purpose in the filmmaking process.
- **Fair Play:** Participants must not interfere with, copy, manipulate, sabotage, or otherwise unfairly influence another team's work or submission.
